I. INTRODUCTION

A. RISK FACTORS

i. STANDARD RISK FACTORS

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh made by it towards setting up the Fund.
- The present scheme is not a guaranteed or assured return scheme.

SCHEME SPECIFIC RISK FACTORS

Investments in equity shares and equity related instruments involve various risks and investors should not invest in the scheme unless they can afford to take these risks. Some of the specific risk factors related to the Scheme include, but are not limited to the following:

- **Market Risk:** Equity shares and equity related instruments are volatile and prone to price fluctuations on a daily basis. Hence, the value of the Equity and Equity Related investments may go down and an investor may not get back the amount invested.
- **Liquidity Risk:** The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio.

The Company may invest in Securities proposed to be listed in due course within the statutory time limit. However, this may temporarily increase the illiquidity risk of the portfolio. Further, in case the unquoted securities fail to get listed it may make it difficult for the Company to sell these when the need arises; and may result in the Company realizing significantly less than the value at which it had previously recorded such investments. Investments in unquoted securities can also be more difficult to value than quoted securities and there is no guarantee that the basis of calculation used in the valuation process will reflect the actual value achievable on realization of those investments.

In addition, Indian companies that go public are typically subject to a regulatory lock-in period preventing shareholders from disposing of the pre-IPO as well as the Anchor share capital for a certain period of time from the date of the IPO. The Company may become subject to such lock-in arrangements if any of its unquoted holdings go public, which would restrict the Company's ability to dispose of such investments during the regulatory lock-in period and further increase the illiquidity of the Company's portfolio.

- **Commodity Price Risk:** The value of underlying investments may be affected due to swing in commodity prices impacting the operating metrics of the underlying businesses.
- **Foreign Exchange Risk** – The businesses that we might invest in might have significant reliance on imports and/or exports, which can increase their vulnerability to sharp fluctuations in Foreign Exchange rates.
- **Corporate Governance Risk:** We generally avoid investing in companies with inferior corporate governance. However, post our investment if poor corporate governance were to manifest in any way such as siphoning of cash, unethical business practices, manipulation of share price, etc then it can impact the value of our investment.
- **Legislative Risk:** The value and marketability of the Company's investments may be affected by changes or developments in the legal and regulatory climate in India. Changes in law/government policies, taxation, etc. can have an adverse or a favorable impact on the underlying investments.
- **Geopolitical Risks** - Geopolitical tensions between India and any of its neighbouring countries can disrupt the economics growth. Subsequently, this might have a non-linear impact on the business that the Scheme has invested in and their valuations.

Also, the value of investments done under the Scheme, may be adversely affected by change in interest rates, socio-political, economic and other circumstances.

Risk Factors related to midcap and small cap stocks – The above mentioned risks are heightened in case of the midcap and small cap stocks as they have lower floats and are relatively less researched. Through position sizing and balanced portfolio construction, the fund manager shall contain and manage these risks.

Risks associated with investments in Fixed Income Securities

- **Interest-Rate Risk:** Fixed income securities such as government bonds, corporate bonds, and money market instruments and derivatives run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in prices depends upon the coupon and maturity of the security, yield at which the security is being traded, put and call options on the security etc.
- **Re-investment Risk:** Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.
- **Basis Risk:** Basis risk arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged.

- **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security, the yield of the underlying benchmark may or may not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Liquidity Risk:** The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.
- **Credit Risk:** This is the risk associated with the issuer of a debenture/bond or a money market instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is considered safer than a bond rated lower by the same rating agency.
- **Liquidity Risk on account of unlisted securities:** The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.
- **Counterparty Risk:** - This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
- **Settlement Risk:** Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.
- **Risks associated with unrated instruments:** - Investments in unrated instruments are subject to the risk associated with investments in any other fixed income securities, as referred above. However, investments in unrated instruments are considered to be subject to greater risk of loss of principal and interest than rated instruments.
- **Duration Risk:** - Duration risk refers to the movement in price of the underlying invested money market / debt instruments due to movement/change in interest rates over different durations of maturity of instruments. In a portfolio of debt assets, the duration risk is measured by the average duration of the portfolio. Duration is used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. Usually Individual duration of the fixed income instruments in the portfolio is calculated and the portfolio duration is the weighted average of such individual instrument duration. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis portfolios having shorter duration. A fall in interest rate generally benefits portfolio having longer duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio.

Risk Factor associated with investing in Securities Segment and Tri-party Repo trade settlement:

The Mutual Fund is a member of securities segment and Triparty Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL).

As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus, the Scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations.

In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/ default losses of another member by CCIL, as a result the Scheme may lose an amount equivalent to its contribution to the default fund.

Risks associated with Derivatives

- The Scheme may invest in derivative products in accordance with and to the extent permitted under the Regulations and by RBI. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.
- The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility to the values.
- Investment in derivatives also requires the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.
- The Scheme may face execution risk, whereby the rates seen on the screen may not be the rate at which the ultimate execution of the derivative transaction takes place.

- The Scheme may find it difficult or impossible to execute derivative transactions in certain circumstances. For example, when there are insufficient bids or suspension of trading due to price limit or circuit breakers, the Scheme may face a liquidity issue.
- The options buyer's risk is limited to the premium paid, while the risk of an options writer is unlimited. However, the gains of an options writer are limited to the premiums earned.
- The exchange may impose restrictions on exercise of options and may also restrict the exercise of options at certain times in specified circumstances and this could impact the value of the portfolio.
- The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price.
- Investments in index futures face the same risk as the investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks.
- The Scheme bears a risk that it may not be able to correctly forecast future market trends or the value of assets, indices or other financial or economic factors in establishing derivative positions for the Scheme.
- The risk of loss in trading futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and the potential high volatility of the futures markets.
- There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. The counter party may default on a transaction before settlement and therefore, the Scheme is compelled to negotiate with another counterparty at the then prevailing (possibly unfavourable) market price.
- Derivatives also carry a market liquidity risk where the derivatives cannot be sold (unwound) at prices that reflect the underlying assets, rates and indices.
- Where derivatives are used for hedging, such use may involve a basis risk where the instrument used as a hedge does not match the movement in the instrument/underlying asset being hedged. The risk may be inter-related also e.g. interest rate movements can affect equity prices, which could influence specific issuer/industry assets.
- Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor / unitholder. Execution of investment strategies depends upon the ability of the fund manager(s) to identify such opportunities which may not be available at all times.

Identification and execution of the strategies to be pursued by the fund manager(s) involve uncertainty and decision of fund manager(s) may not always be profitable. No assurance can be given that the fund manager(s) will be able to identify or execute such strategies.

- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The following are certain additional risks involved with use of fixed income derivatives:

Interest rate risk: Derivatives carry the risk of adverse changes in the price due to change in interest rates.

Liquidity risk: During the life of the derivative, the benchmark might become illiquid and might not be fully capturing the interest rate changes in the market, or the selling, unwinding prices might not reflect the underlying assets, rates and indices, leading to loss of value of the portfolio.

Risks associated with Covered Call Strategy

The risk associated with covered calls is the loss of upside, i.e. if the shares are assigned (called away), the option seller forgoes any share price appreciation above the option strike price.

The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock. The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity, or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.

The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received the scheme would be at a loss.

Risk associated with Imperfect Hedging using Interest Rate Futures

Basis Risk

Each security could be hedged with an Interest Rate Future. Hypothetically creating an imperfect hedge, IGB 7.17% 2028 on which AMC are long, and short on an (interest rate future) IRF 6.79% 2027 for which the underlying is 10 year bond, if the spot yield are 7% and future yield is 7.3% the basis would be of 0.3%. There is an inherent risk of this basis (spread) narrowing, widening or remaining stable/flat.

Spread widening means that the spot becomes 6.9% and future becomes 7.25% - the basis increases in total by 0.05% and new basis is 0.35%. Due to this there would be a profit of 5bps on the IGB 8.15% 2026 long bond and there would be a loss of 5bps on IRF short future position. This would result in an overall profit as the price of a bond would increase more compared to the increase in the price of IRF due to the duration and convexity effect.

Spread narrowing means that the spot becomes 7.2% and future becomes 7.35% - the basis decreases in total by 0.15% and the new basis is 0.15%. This would result in a loss as the price of IGB 8.15% 2026 bond would decrease more compared to the decrease in the price of IRF due to the duration and convexity effect.

Spread remaining flat or stable means that the spread does not move or is a negligible change in the basis i.e. in our example is of 0.3%.

Mispricing Risk, or improper valuation

Market circumstances may necessitate unwinding the derivative positions at sub-optimal prices during periods of market dislocation triggered by contagion or turmoil e.g. if the expected upward trajectory of yields reverses course and begins to spiral downward, most participants with short Interest Rate Futures positions are likely to seek an unwinding, leading to a potential amplification in the adverse price movement, and impact there from.

Liquidity Risk

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.

Correlation weakening, and consequent risk of regulatory breach

SEBI regulation mandates minimum correlation criteria of 0.9 (calculated on a 90 day basis) between the portfolio being hedged and the derivative serving as the hedge; in cases where this limit is breached (i.e. when the 90-day correlation falls below 0.9), a rebalancing period of 5 working days has been permitted. Inability to satisfy this requirement within the stipulated period due to difficulties in re-balancing would lead to a lapse of the exemption in gross exposure computation. The entire derivative exposure would then need to be included in gross exposure, which may result in gross exposure in excess of 100% of net asset value; leverage is not permitted as per SEBI guidelines.

Risks associated with investing in foreign securities/ overseas investments/ offshore securities

Subject to necessary approvals, if any and within the investment objectives of the Scheme, the Scheme may invest in overseas markets which carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.

Since the Scheme would invest only partially in foreign securities, there may not be readily available and widely accepted benchmarks to measure performance of such Scheme. To manage risks associated with foreign currency and interest rate exposure, the Fund may use derivatives for efficient portfolio management and hedging and portfolio rebalancing and in accordance with conditions as may be stipulated under the Regulations and by RBI from time to time.

Investment in Foreign Securities involves a currency risk. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital to India may also be hampered by changes in

regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment.

Risk factors associated with repo transactions in corporate bonds

The market for the aforesaid product is over the counter (OTC) and illiquid. Hence, repo obligations cannot be easily sold to other parties. If a counterparty fails, the scheme would have to take recourse to the collateral provided. If a counterparty fails to repay and the value of the collateral falls beyond the haircut, then the Scheme would be exposed to a loss of interest or principal.

Further, if the Scheme needs to take recourse to the debt securities provided as collateral, and the issuer of the debt securities makes a default, the scheme may lose the whole, or substantial portion of the amount. This risk is somewhat mitigated by the fact that only bonds which have credit rating of AA and above can be accepted as collateral for repo transactions.

Risk Factor associated with investing in Tier I and Tier II Bonds:

Tier I and Tier II Bonds are unsecured and the RBI prescribes certain restrictions in relation to the terms of these Bonds:

Tier I and Tier II bonds are unsecured in nature. The claims of the Bondholders shall (i) be subordinated to the claims of all depositors and general creditors of the Bank; (ii) neither be secured nor covered by any guarantee of the Issuer or its related entity or other arrangement that legally or economically enhances the seniority of the claim vis-a-vis creditors of the Bank; (iii) Unless the terms of any subsequent issuance of bonds/debentures by the Bank specifies that the claims of such subsequent bond holders are senior or subordinate to the Bonds issued under the Disclosure Document or unless the RBI specifies otherwise in its guidelines, the claims of the Bondholders shall be pari passu with claims of holders of such subsequent debentures/bond issuances of the Bank; (iv) rank pari passu without preference amongst themselves and other subordinated debt eligible for inclusion in Tier 1 / Tier 2 Capital as the case may be. The Bonds are not redeemable at the option of the Bondholders or without the prior consent of RBI.

The Bonds (including all claims, demands on the Bonds and interest thereon, whether accrued or contingent) are issued subject to loss absorbency features applicable for non-equity capital instruments issued in terms of Basel III Guidelines including in compliance with the requirements of Annex 5 thereof and are subject to certain loss absorbency features as described in bond prospectus and required of Tier 1 / Tier 2 instruments at the Point of Non Viability as provided for in Annex 16 of the aforesaid Basel III Guidelines as amended from time to time.

The Bonds are essentially non-equity regulatory instruments, forming part of a Bank's capital, governed by Reserve Bank of India (RBI) guidelines and issued under the issuance and listing framework given under Chapter VI of the SEBI (Issue and Listing of Non-Convertible Redeemable Preference Shares) Regulations, 2013 ("NCRPS Regulations"). These instruments have certain unique features which, inter-alia, grant the issuer (i.e. banks, in consultation with RBI) a discretion in terms of writing down the principal / interest, to skip interest payments, to make an early recall etc. without commensurate right for investors to legal recourse, even if such actions of the issuer might result in potential loss to investors. Payment of coupon on the Bonds is subject to the terms of Information Memorandum, including Coupon Discretion, Dividend Stopper Clause, Loss Absorption as contained in the Information Memorandum. The Bonds are subject to loss absorption features as per the guidelines prescribed by RBI.

There may be no active market for the Bonds on the platform of the Stock Exchanges. As a result, the liquidity and market prices of the Bonds may fail to develop and may accordingly be adversely affected:

There is no assurance that a trading market for the Bonds will exist and no assurance as to the liquidity of any trading market. Although an application will be made to list the Bonds on the NSE and/or BSE, there can be no assurance that an active market for the Bonds will develop, and if such a market were to develop, there is no obligation on the issuer to maintain such a market. The liquidity and market prices of the Bonds can be expected to vary with changes in market and economic conditions, financial condition and prospects and other factors that generally influence market price of such instruments. Such fluctuations may significantly affect the liquidity and market price of the Bonds, which may trade at a discount to the price at which one purchases these Bonds.

Issuer is not required to and will not create or maintain a Debenture Redemption Reserve (DRR) for the Bonds issued under this Disclosure Document:

As per the Companies (Share Capital and Debentures) Rules, 2014, as amended, no Debenture Redemption Reserve is required to be created by Banking Companies issuing debentures.

There is no assurance that the Tier I / Tier II bonds will not be downgraded:

The Rating agencies, which rate the Bonds, have a slightly different rating methodology for Tier I and Tier II bonds. In the event of deterioration of the financial health of the Issuer or due to other reasons, the rating of the Bonds may be downgraded whilst the ratings of other bonds issued by the issuer may remain constant. In such a scenario, for Tier I and Tier II Bond holders may incur losses on their investment.

Risks associated with Short Selling

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations.

Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit. This may result in major loss to the Scheme.

At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In addition, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

Risks associated with Securities Lending

For Equity Instruments:

As with other modes of extensions of credit, there are risks inherent to securities lending. During the period the security is lent, the Scheme may not be able to sell such security and in turn cannot protect from the falling market price of the said security. Under the current securities lending and borrowing mechanism, the Scheme can call back the securities lent any time before the maturity date of securities lending contract. However, this will be again the function of liquidity in the market and if there are no lenders in the specified security, the Scheme may not be able to call back the security and in the process, the Scheme will be exposed to price volatility. Moreover, the fees paid for calling back the security may be more than the lending fees earned by Scheme at the time of lending the said security and this could result in loss to the Scheme. Also, during the

period the security is lent, the Fund will not be able to exercise the voting rights attached to the security as the security will not be registered in the name of the Scheme in the records of the Depository/issuer.

For Debt Instruments:

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

Risk associated with Investments in REITs and InvITs

Price-Risk or Interest-Rate Risk: REITs & InvITs run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.

Credit Risk: In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. REITs & InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. As these products are new to the market they are likely to be exposed to liquidity risk.

Reinvestment Risk: Investments in REITs & InvITs may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate

Risk of lower than expected distributions: The distributions by the REIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/ InvITs receives as dividends or the interest and principal payments from portfolio assets.

The above are some of the common risks associated with investments in REITs & InvITs. There can be no assurance that investment objectives will be achieved, or that there will be no loss of capital. Investment results may vary substantially on a monthly, quarterly or annual basis.

Risks associated with Segregated portfolio

a) Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.

b) Security(ies) held in segregated portfolio may not realize any value.

c) Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

Risk factors associated with investing in Non-Convertible Preference Shares

Credit Risk - Credit risk is the risk that an issuer will be unable to meet its obligation of payment of dividend and/ or redemption of principal amount on the due date. Further, for non-cumulative preference shares, issuer also has an option to not pay dividends on preference shares in case of inadequate profits in any year.

Liquidity Risk - The preference shares generally have limited secondary market liquidity and thus we may be forced to hold the instrument till maturity.

Unsecured in Nature - Preference shares are unsecured in nature and rank lower than secured and unsecured debt in hierarchy of payments in case of liquidation. Thus there is significant risk of capital erosion in case the company goes into liquidation.

Risks associated with Investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities:

The risks factors stated below for the Structured Obligations & Credit Enhancement are in addition to the risk factors associated with debt instruments.

Credit rating agencies assign CE rating to an instrument based on any identifiable credit enhancement for the debt instrument issued by an issuer. The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer.

Liquidity Risk: SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold.

Credit Risk: The credit risk of debt instruments which are CE rated is based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions.

Therefore apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.

Risk factors associated with investing in Securitized Debt

The Risks involved in Securitised Papers described below are the principal ones and does not represent that the statement of risks set out hereunder is exhaustive.

Limited Liquidity & Price Risk

There is no assurance that a deep secondary market will develop for the Certificates. This could limit the ability of the investor to resell them.

Limited Recourse, Delinquency and Credit Risk

The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the Certificate Holders against the Investors' Representative. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts to the Certificate Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of a Obligor to repay his obligation, the Servicer may repossess and sell the Asset.

However many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realise the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

Risks due to possible prepayments and Charge Offs

In the event of prepayments, investors may be exposed to changes in tenor and yield. Also, any Charge Offs would result in the reduction in the tenor of the Pass Through Certificates (PTCs).

Bankruptcy of the Swap Bank

If the Swap Bank, becomes subject to bankruptcy proceedings then an Investor could experience losses or delays in the payments due under the Interest Rate Swap Agreement.

Risk of Co-mingling

With respect to the Certificates, the Servicer will deposit all payments received from the Obligors into the Collection Account. However, there could be a time gap between collection by a Servicer and depositing the same into the Collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the Loan Agreements may not be segregated from other funds of originator. If originator in its capacity as Servicer fails to remit such funds due to Investors, the Investors may be exposed to a potential loss.

Risks Factors associated with transaction in Units through stock exchange(s)

In respect of transaction in Units of the Scheme through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control.

Concentration	The fund manager will endeavor to build well diversified portfolio within the overall fund specific investment strategy through diversification across stocks/sectors.
Liquidity	Periodical review of the liquidity position of each script (Market capitalization, average volume in the market vis – a- vis Portfolio Holding). The fund manager will monitor and manage the liquidity at portfolio construction level.
For making investments in Fixed Income and Money Market Instruments	
Credit Risk	In addition to external ratings by the accredited credit rating agencies, the credit team will undertake independent credit assessment that would capture the quantitative (financial statements) and qualitative aspects (accounting policies, management quality, disclosure standards etc.) of a company to assess its fundamental credit strength and guide the investment decisions in the schemes. There is also a regulatory cap on exposure to each issuer to ensure a diversified portfolio and reduced credit risk in the portfolio.
Liquidity Risk	The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are an important criteria in security selection process. This ensures that liquidity risk is managed.
Investing in unrated securities	The schemes have a rigorous credit research process and as such all investments, rated or unrated, are analyzed and approved by the Investment Review Committee before investment by the scheme. Further there is a regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities.

Reinvestment Risk:	Reinvestment risk is an inherent feature of the portfolio management process. It may be managed, to a certain extent, by seeking to invest in securities with relatively low intermittent cash flows.

B. REQUIREMENT OF MINIMUM UNITHOLDERS IN THE SCHEME

The Scheme shall have a minimum of 20 Unitholders and no single Unitholder shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 Unitholders in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at Applicable NAV. The aforesaid conditions should be complied with in each subsequent calendar quarter on an average basis. In case the Scheme does not have a minimum of 20 Unitholders on an ongoing basis for each calendar quarter, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at Applicable NAV. If there is a breach of the 25% limit by any Unitholder over the quarter, a rebalancing period of one month would be allowed and thereafter the Unitholder who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said Unitholder to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic Redemption by the Mutual Fund on the Applicable NAV on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

Investment in Securitised Debt

A securitisation transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers. Generally available asset classes for securitisation in India are: • Commercial vehicles • Auto and two wheeler pools • Mortgage pools (residential housing loans) • Personal loan, credit card and other retail loans • Corporate loans/receivable

The following are certain additional disclosures w.r.t. investment in securitized debt:

(i) How the risk profile of securitized debt fits into the risk appetite of the Scheme

Securitized debt is a form of conversion of normally non-tradable loans to transferable securities. This is done by assigning the loans to a special purpose vehicle (a trust), which in turn issues Pass-Through-Certificates (PTCs). These PTCs are transferable securities with fixed income characteristics. The risk of investing in securitized debt is similar to investing in debt securities. However, it differs in two respects.

a) Typically the liquidity of securitized debt is less than similar debt securities.

b) For certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the reinvestment rates are lower than initially envisaged.

Because of these additional risks, securitized debt typically offers higher yields than debt securities of similar credit rating and maturity. If the fund manager judges that the additional risks are suitably compensated by the higher returns, he may invest in securitized debt up to the limits specified in the asset allocation table above

(ii) Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc

The originator is the person who has initially given the loan. The originator is also usually responsible for servicing the loan (i.e. collecting the interest and principal payments). An analysis of the originator is especially important in case of retail loans as this affects the credit quality and servicing of the PTC. The key risk is that of the underlying assets and not of the originator. For example, losses or performance of earlier issuances does not indicate quality of current series. However such past performance may be used as a guide to evaluate the loan standards, servicing capability and performance of the originator.

Originators may be: Banks, Non Banking Finance Companies, Housing Finance Companies, etc. The fund manager / credit analyst evaluates originators based on the following parameters

- Track record
- Willingness to pay, through credit enhancement facilities etc.
- Ability to pay
- Business risk assessment, wherein following factors are considered:
 - Outlook for the economy (domestic and global)
 - Outlook for the industry

In addition a detailed review and assessment of rating rationale is done including interactions with the originator as well as the credit rating agency.

The following additional evaluation parameters are used as applicable for the originator / underlying issuer for pool loan and single loan securitization transactions:

Transaction structure including Par versus premium and credit enhancement

- Reputation of Originator in the market
- Proportion of overdue assets of the pool or the underlying loan, as the case may be
- Track record of servicing of the pool or the loan, as the case may be
- Any disputes or litigations in the originated pools
- Credit quality and rating
- Loan to Value ratio

- Liquidity facility

(iii) Risk mitigation strategies for investments with each kind of originator

Risk would be mitigated to a large extent by the critical evaluation parameters mentioned above. Further, Risk mitigation strategies typically include additional credit enhancement, over collateralization, interest subvention, presence of subordinate tranches, analysing ageing of the pools i.e. how long the loan has been with Originator before securitization etc.

Some of the risks with securitized debt investments and the corresponding risk mitigating strategies are listed below:

Risk mitigation strategy

Limited Recourse, Delinquency and Credit Risk

In addition to careful scrutiny of credit profile of borrower/pool additional security in the form of adequate cash collaterals and other securities may be obtained to ensure that they all qualify for similar rating

Bankruptcy of the Originator or Seller

Normally, specific care is taken in structuring the securitization transaction so as to minimize the risk of the sale from the Originator not being construed as a 'true sale'. It is also in the interest of the originator to demonstrate the transaction as a true sale to get the necessary revenue recognition and tax benefits.

Liquidity and Price risk

Securitized debt instruments are relatively illiquid in the secondary market and hence they are generally held to maturity. The liquidity risk and HTM (Held To Maturity) nature is taken into consideration at the time of analyzing the appropriateness of the securitization.

Prepayment Risk

A certain amount of prepayments is assumed in the calculations at the time of purchase based on historical trends and estimates. Further, a stress case estimate is calculated and additional margins are built in.

(iv) The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments.

In case of securitization involving single loans or a small pool of loans, the credit risk of the borrower is analyzed. In case of diversified pools of loans, the overall characteristic of the loans is analyzed to determine the credit risk.

The credit analyst looks at ageing (i.e. how long the loan has been with the originator before securitization) as one way of judging the performance potential of the PTC. Additional risk mitigants may include interest subvention, over collateralization, presence of an equity / subordinate tranche and / or guarantees. The credit analyst also uses analyses by credit rating agencies on the risk profile of the securitized debt.

Currently, the following parameters are used while evaluating investment decision relating to a pool securitization transaction. The Investment Review Committee may revise the parameters from time to time.

Characteristics/Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Micro Finance Pools *	Personal Loans *	Single Sell Downs	Others
Approximate Average maturity (in Months)	Up to 10 years	Up to 5 years	Up to 5 years	Up to 3 years	Up to 80 weeks	Up to 3 years	Refer Note 1	Refer Note 2
Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	>5%	>5%	>4%	>4%	>4%	>4%	"	"
Average Loan to Value Ratio	<90%	<90%	<90%	<90%	Unsecured	Unsecured	"	"
Average seasoning of the Pool	>3 months	>3 months	>3 months	>3 months	>3 months	>3 months	"	"
Maximum single exposure range (%)	<5%	<7%	Retail	Retail	Retail	Retail	"	"
Average single exposure range %	<5%	<5%	Retail	Retail	Retail	Retail	"	"

Note 1: In case of securitization involving single loans or a small pool of loans, the credit risk of the borrower is analyzed. The investment limits applicable to the underlying borrower are applied to the single loan sell-down.

Note 2: Other investments will be decided on a case-to-case basis.

The credit analyst may consider the following risk mitigating measures in his analysis of the securitized debt:

Size of the loan – The size of the loan is generally analyzed on a sample basis and an analysis of the static pool of the originator is undertaken to ensure that the same matched with static pool characteristics. It also indicates whether there is high reliance on very small ticket size borrower which could result in delayed and expensive recoveries.

- Average original maturity of the pool – the analysis of the average maturity of the pool is undertaken to evaluate whether the tenor of the loans are generally in line with the average loan in the respective industry and repayment capacity of the borrower.
- Loan to value ratio, average seasoning of the pool of underlying assets – these parameters will be evaluated based on the asset class as mentioned in the table above.
- Default rate distribution – the credit team generally ensures that all the contracts in the pool are current to ensure zero default rate distribution.
- Geographical distribution – the analysis of geographical distribution of the pool is undertaken to ensure prevention of concentration risk.

- Credit enhancement facility – credit enhancement facilities in the form of cash collateral, such as fixed deposits, bank guarantee etc. could be obtained as a risk mitigation measure.
- Liquid facility – these parameters will be evaluated based on asset class as mentioned in the table above.
- Structure of the pool of the underlying assets – The structure of the pool of the underlying asset class or combination of various asset classes as mentioned in the table above. We could add new asset class depending upon the securitization structure and changes in market acceptability of asset classes

(v) Minimum retention period of the debt by originator prior to securitization

Issuance of securitized debt is governed by the Reserve Bank of India. RBI norms cover the "true sale" criteria including credit enhancement and liquidity enhancements. In addition, RBI has proposed minimum holding period before they can be securitized. The minimum holding period depends on the tenor of the securitization transaction. The Fund will invest in securitized debt that are compliant with the laws and regulations.

(vi) Minimum retention percentage by originator of debts to be securitized

RBI has prescribed the minimum retention percentage as 5% or 10% of the book value of the loans being securitised depending on the original maturity of the loans and the features of the securitisation transaction.

(vii) The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

The key risk is securitized debt relates to the underlying borrowers and not the originator. In a securitization transaction, the originator is the seller of the debt(s) and the fund is the buyer. However, the originator is also usually responsible for servicing the loan (i.e. collecting the interest and principal payments). As the originators may also invest in the scheme, the fund manager shall ensure that the investment decision is based on parameters as set by the Investment Review Committee of the asset management company and committee shall review the same at regular interval.

(viii) The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt.

On an on-going basis the rating movement of the securitized debts will be monitored. Credit research agencies also provide analysis of individual instruments and pools. The periodic reports received by the AMC on pool performance will be scanned to check for any change in asset quality and related impact on debt servicing and any impact that it can have on the credit ratings. Note: The information contained herein is based on current market conditions and may change from time to time based on changes in such conditions, regulatory changes and other relevant factors. Accordingly, our investment strategy, risk mitigation measures and other information contained herein may change in response to the same.

The securities / instruments mentioned above and such other securities the Scheme is permitted to invest in could be listed, unlisted, privately placed, secured, unsecured, rated or unrated and of any maturity.

The securities may be acquired through initial public offering (IPOs), secondary market, private placement, rights offers, negotiated deals. Further investments in debentures, bonds and other fixed income securities will be in instruments which have been assigned investment grade rating by the Credit Rating Agency.

Investment in unrated debt instruments shall be subject to complying with the provisions of the Regulations and within the limit as specified in Schedule VII to the Regulations. Pursuant to SEBI Circular No. MFD/CIR/9/120/2000 dated November 24, 2000, the AMC may constitute committee(s) to approve

proposals for investments in unrated debt instruments. The AMC Board and the Trustee shall approve the detailed parameters for such investments. However, in case any unrated debt security does not fall under the parameters, the prior approval of Board of AMC and Trustee shall be sought.

For applicable regulatory investment limits please refer paragraph "Investment Restrictions". Details of various derivative strategies/examples of use of derivatives have been provided under the section "Derivatives Strategy"

The Fund Manager reserves the right to invest in such securities as maybe permitted from time to time and which are in line with the investment objectives of the Scheme.

WHAT ARE THE INVESTMENT STRATEGIES?

The investment objective of the scheme is to generate capital appreciation / income from a portfolio, predominantly of equity & equity related instruments. The Scheme would predominantly invest in companies spanning entire market capitalization that are likely to: a) achieve above average growth b) enjoy distinct competitive advantages, and c) have superior financial strength. The aim of the equity strategy will be to build a portfolio, representing a cross section of companies diversified across major industries, economic sectors and market capitalization that offer an acceptable risk reward balance.

Though every endeavour will be made to achieve the objective of the Scheme, the AMC/ Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

To achieve the investment objective, the scheme will invest in equity and equity linked instruments across market capitalization viz. Large cap, mid cap and small companies.

Definition of Large Cap, Mid Cap and Small Cap:

As per the SEBI circular SEBI/HO/IMD/DF3/CIR/P/2017/114 of October 06, 2017 a definition has been provided of large cap, mid cap and small cap as follows.

- a) Large Cap: 1st - 100th company in terms of full market capitalization
- b) Mid Cap: 101st - 250th company in terms of full market capitalization
- c) Small Cap: 251st company onwards in terms of full market capitalization.

Subsequent to any updation in the above list, the portfolio would be re-balanced in line with the updated list within a period of one month.

This definition and updation will continue till such time that it may be revised or modified by SEBI or any other agency as prescribed by SEBI.

The scheme shall invest part of its portfolio in debt and money market instruments subject to permissible limits laid under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rates outlook. The scheme shall also have an exposure to derivative instruments for the purpose of hedging, portfolio balancing and optimising returns.

Derivatives Strategy:

Equity Derivatives Strategy:

The Scheme may invest in various derivative instruments which are permissible under the applicable regulations. Derivatives will be used for the purpose of hedging, and portfolio balancing or such other purpose as may be permitted under the regulations and Guidelines from time to time. Such investments shall be subject to the investment objective and strategy of the Scheme and the internal limits if any, as laid down from time to time. These include but are not limited to futures (both stock and index) and options (stock and index). Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument such as interest rates, exchange rates, commodities and equities.

The following section describes the concepts and examples of derivatives that may be used by the fund manager. The strategies and illustrations provided below are only for the purpose of understanding the concept and uses of derivative instruments.

Index Futures

Index Futures may be used by the Fund to hedge against market downturns (shorting the index) or benefit from a bullish outlook on the market (going long on the index).

Example on how it could be used: Assume Nifty near month future contract is trading at Rs. 7,500, and the fund manager has a view that nifty will depreciate going forward; the Scheme can initiate a sale transaction of Nifty futures at the above said rate without holding a underlying long equity position. Once the price falls and let's assume after 15 days the Nifty falls to 7400, the Scheme can initiate a square-up transaction by buying the said futures and book a profit of Rs. 100.

In a similar way, if the fund manager has a view that nifty will appreciate going forward, the Scheme can initiate a long transaction without an underlying cash/ cash equivalent subject to the extant regulations.

Index Options

Index options offers the Fund the opportunity to either capitalize on an expected market move or to protect holdings in the underlying instruments. The underlying in the case of Index options are indices.

Buy Call

The fund, to benefit from anticipated uptrend in broad markets, from time to time can buy call options. A long call option will give the Fund the option but not the obligation to buy the Index at the strike price. Stop loss is not defined and will be monitored by the investment team.

Example on how it could be used

Suppose an investor buys a Call option on 1 lot of Nifty 50- Nifty (Lot Size: 75 units)

Nifty index (European option).

Nifty 1 Lot Size: 75 units

Spot Price (S): 7500

Strike Price (x): 7550 (Out-of-Money Call Option)

Premium: 80

Total Amount paid by the investor as premium $[75 \times 80] = 6000$

There are two possibilities i.e. either the index moves up over the strike price or remains below the strike price.

Scenario 1- The Nifty index goes up

An investor sells the Nifty Option described above before expiry:

Suppose the Nifty index moves up to 7600 in the spot market and the premium has moved to Rs 150 and there are 15 days more left for the expiry. The investor decides to reverse his position in the market by selling his 1 Nifty call option as the option now is In the Money.

His gains are as follows:

Nifty Spot: 7600

Current Premium: Rs.150

Premium paid: Rs.80

Net Gain: $\text{Rs.150} - \text{Rs.80} = \text{Rs.70}$ per unit

Total gain on 1 lot of Nifty = Rs.5250 (75×70)

Scenario 2 - The Nifty index moves to any level below 7500

Then the investor does not gain anything but on the other hand his loss is limited to the premium paid:

Net Loss is Rs.6000 (Loss is capped to the extent of Premium Paid)

(Rs 80 Premium paid * Lot Size: 75 units)

Simple Scenario for holding on to expiry: The fund buys a call option at the strike price of say Rs.7500 and pays a premium of say Rs. 80, the fund would earn profits if the market price of the stock at the time of expiry of the option is more than 7580 being the total of the strike price and the premium thereon. If on the date of expiry of the option the stock price is below Rs 7500, the fund will not exercise the option while it loses the premium of Rs 80

Buy Put

The Fund may buy index put options to hedge existing portfolios. The put option will give the Fund the flexibility to sell the portfolio at the strike price if the index falls below the strike price. The Fund will have to pay a premium to the option writer to buy this put option. There is no defined stop loss as the same will be monitored by the investment team.

Example on how it could be used

Suppose an investor buys a Put option on 1 lot of Nifty 50- Nifty (Lot Size: 75 units)

Nifty index (European option).

Nifty 1 Lot Size: 75 units

Spot Price (S): 7500

Strike Price (x): 7450 (Out-of-Money Call Option)

Premium: 80

Total Amount paid by the investor as premium $[75 \times 80] = 6000$

There are two possibilities i.e. either the index moves down from the strike price or goes above the strike price.

Scenario 1- The Nifty index goes down

An investor sells the Nifty Option described above before expiry:

Suppose the Nifty index moves down to 7400 in the spot market and the premium has moved to Rs 150 and there are 15 days more left for the expiry. The investor decides to reverse his position in the market by selling his 1 Nifty put option as the option now is In the Money.

His gains are as follows:

Nifty Spot: 7600

Current Premium: Rs.150

Premium paid: Rs.80

Net Gain: $\text{Rs.150} - \text{Rs.80} = \text{Rs.70}$ per unit

Total gain on 1 lot of Nifty = Rs.5250 (75×70)

Scenario 2 - The Nifty index moves to any level above 7500

Then the investor does not gain anything but on the other hand his loss is limited to the premium paid:

Net Loss is Rs.6000 (Loss is capped to the extent of Premium Paid)

($\text{Rs } 80 \text{ Premium paid} \times \text{Lot Size: } 75 \text{ units}$)

Simple Scenario for holding on to expiry: The fund buys a Put Option at Rs 7500 by paying a premium of say Rs 80. If the stock price goes down to Rs. 7400, the fund would protect its downside and would only have to bear the premium of Rs 80 instead of a loss of Rs 100 whereas if the stock price moves up to say Rs. 7600 the fund may let the Option expire and forego the premium thereby capturing Rs. 100 upside after bearing the premium of Rs. 80.

Stock Futures

Buy Stock Futures

The Fund can buy stock futures to realize a positive outlook on the stock or to rebalance sector positions. There will be no defined stop loss given the high volatility and the same will be monitored by the investment team.

Stock Options

Buy Call

To capitalize positive view on a stock or to rebalance sector positions, the Fund may buy call options on the stock against the payment of a premium. Buying a call option provides the Fund the option but not the

obligation to buy the stock at the strike price. There will be no defined stop loss and the same shall be monitored by the investment team.

Buy Put

To implement a negative view on the stock or to hedge against downside in an existing stock holding or to rebalance sector positions, the Fund may purchase stock put options against payment premium. This gives the option but not the obligation to the Fund to sell the stock if stock prices falls below the strike price.

Covered Call Strategy

The covered call strategy is a strategy where a fund manager writes call options against an equivalent long position in an underlying stock thereby giving up a part of the upside from the long position. The strategy allows the fund manager to earn premium income from the option writing in addition being able to capture the remaining part of the upside.

Assumptions: Current price of stock A: Rs. 27.87 per share

1 contract = 100 shares

Total no of contracts: 10

Strike price: Rs. 30/- per share

Premium: Rs. 0.35 per share

Suppose, on December 6, 2021, the writer of the call owns 1,000 shares of Company A, which is currently trading at Rs. 27.87 per share. The writer of the call writes 10 call option contracts for company A with a strike price of Rs. 30 per share that expires in January 2022. The writer receives premium of 0.35 per share for the calls, which equals Rs. 35.00 per contract for a total of Rs. 350.00.

Total premium = (Rs. 0.35 per share) * (100 shares per contract) * (10 contracts) = Rs. 350.

The following can be the scenarios reflecting risks and benefits at the end of the option expiry:

Case 1 - Stock falls below current price of Rs. 27.87 per share: The option expires worthless. Hence the loss from the stock position gets reduced to the extent of the premium income.

Case 2 - Stock goes up above current price but remains below Rs. 30 per share (strike price): The option expires worthless. Hence the income from the gains in the stock price gets further boosted to the extent of the premium income.

Case 3 - Stock goes above Rs. 30 per share: Option position goes out of the money for the writer but the losses from the option position are matched by the gains from the underlying stock position above Rs. 30 per share. Hence the return from the position is equal to the return from stock upto the strike price of Rs. 30 per share and the premium income from the option.

Benefits of using Covered Call Strategy in Mutual Funds

The covered call strategy can be followed by the Fund Manager in order to hedge risk thereby resulting in better risk adjusted returns of the Scheme. The strategy offers the following benefits:

- a) Hedge against market risk - Since the fund manager sells a call option on a stock already owned by the mutual fund scheme, the downside from fall in the stock price would be lower to the extent of the premium earned from the call option.
- b) Generating additional returns in the form of option premium in a range bound market. Thus, a covered call strategy involves gains for unit holders in case the strategy plays out in the right direction

Risk associated with covered calls

The risk associated with covered calls is the loss of upside, i.e. if the shares are assigned (called away), the option seller forgoes any share price appreciation above the option strike price. Please refer risk factors section on detail derivatives risk factors.

Fixed Income Derivatives Strategy

The Scheme may use Derivative instruments like interest rate swaps like Overnight Indexed Swaps ("OIS"), forward rate agreements, interest rate futures (as and when permitted) or such other Derivative instruments as may be permitted under the applicable regulations. Derivatives will be used as permitted under the regulations and Guidelines from time to time including but not limited to for the purpose of hedging, and portfolio balancing etc.

The Fund will be allowed to take exposure in interest rate swaps only on a non-leveraged basis. A swap will be undertaken only if there is an underlying asset in the portfolio. In terms of Circular No. MFD.BC.191/07.01.279/1999-2000 and MPD.BC.187/07.01.279/1999-2000 dated November 1, 1999 and July 7, 1999 respectively issued by RBI permitting participation by Mutual Funds in interest rate swaps and forward rate agreements, the Fund will use Derivative instruments for the purpose of hedging and portfolio balancing. The Fund may also use derivatives for such purposes as maybe permitted from time to time. Further, the guidelines issued by RBI from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to by the Mutual Fund.

IRS and FRA do also have inherent credit and settlement risks. However, these risks are substantially reduced as they are limited to the interest streams and not the notional principal amounts.

Investments in Derivatives will be in accordance with the extant Regulations / guidelines Derivatives will be used as permitted under the regulations and Guidelines from time to time including but not limited to for the purpose of hedging, and portfolio balancing etc. The circumstances under which such transactions would be entered into would be when, for example using the IRS route it is possible to generate better returns / meet the objective of the Scheme at a lower cost. e.g. if buying a 2 Yr FBIL Mibor based instrument and receiving the 2 Yr swap rate yields better return than the 2 Yr AAA corporate, the Scheme would endeavor to do that. Alternatively, the Scheme would also look to hedge existing fixed rate positions if the view on interest rates is that it would likely rise in the future.

The following information provides a basic idea as to the nature of the Derivative instruments proposed to be used by the Fund and the benefits and risks attached therewith. Please note that the examples have been given for illustration purposes only.

Interest Rate Swaps

The Indian markets have faced high volatility in debt markets. An interest rate swap is a contractual agreement between two counterparties to exchange streams of interest amount on a notional principal basis. In this, one party agrees to pay a fixed stream of interest amount against receiving a variable or floating stream of interest amount. The variable or floating part is determined on a periodical basis.

Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme.

Example

Entity A has Rs.50 crores, 3-month asset which is being funded through call. Entity B, on the other hand, has deployed in overnight call money market Rs.50 crores, 3-month liability. Both the entities are taking on an interest rate risk.

To hedge against the interest rate risk, both the entities can enter into a 3-month swap agreement based on say FBIL MIBOR (Financial Benchmarks India Private Limited Mumbai Inter Bank Offered Rate). Through this swap, entity B will receive a fixed pre-agreed rate (say 7%) and pay FBIL MIBOR ("the benchmark rate") which will neutralize the interest rate risk of lending in call. Similarly, entity A will neutralize its interest rate risk from call borrowing as it will pay 8% and receive interest at the benchmark rate.

Assuming the swap is for Rs.50 crores 1 January to 1 April, Entity A is a floating rate receiver at the overnight compounded rate and Entity B is a fixed rate receiver. On a daily basis, the benchmark rate fixed by NSE will be tracked by them.

On April 1, they will calculate as explained below:

Entity A is entitled to receive daily compounded call rate for 91 days and pay 7% fixed.

Entity B is entitled to receive interest on Rs.50 crores @ 7% i.e. Rs. 87.26 lacs, and pay the compounded benchmark rate.

Thus on December 1, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 87.26 lacs, entity B will pay entity A the difference and vice versa.

The above example illustrates the use of Derivatives for hedging and optimizing the investment portfolio. Swaps have their own drawbacks like credit risk, settlement risk. However, these risks are substantially reduced as the amount involved is interest streams and not principal.

Forward Rate Agreement (FRA)

A FRA is referred to by the beginning and end dates of the period covered in the transaction. A 2x5 FRA means the 3 month rate starting 2 months from now.

For example, a corporate has a three month fixed liability three months from now. To meet this liability the company enters into a 3x6 FRA where it receives 7.25% for 100 crore and fixes the interest cost for the 3-6 months period. If the actual three month rate three months from now is 7% the corporate has gained 25 bps through interest cost. As the settlement is done at the beginning of the period, the net present value of the savings needs to be calculated using the 3 month rate as the discount rate.

Interest savings = INR 100 crores * 25 bps * 92/365 (assuming 92 days in the 3 month period and 365 days for the year) = INR 6,30,137.

Settlement Amount = $\text{INR } 6,30,137 / (1 + 7\% * 92/365) = \text{INR } 6,19,212$

Interest Rate Futures

Assume that ABC hold GOI securities, hence is exposed to the risk of rising interest rates, which in turn results in the reduction in the value of their portfolio. So in order to protect against a fall in the value of their portfolio due to falling bond prices, they can take short position in IRF contracts.

Example:

Date: 01-April-2019

Spot price of GOI Security: Rs 100.05

Futures price of IRF Contract: Rs 100.12

On 01-April-2021 ABC bought 2000 GOI securities from spot market at Rs 100.05. He anticipates that the interest rate will rise in near future. Therefore to hedge the exposure in underlying market he may sell May 2021 Interest Rate Futures contracts at Rs. 100.12.

On 16-May-2021 due to increase in interest rate:

Spot price of GOI Security: Rs 99.24

Futures Price of IRF Contract: Rs 99.28

Loss in underlying market will be $(99.24 - 100.05) \times 2000 = \text{Rs } 1620$

Profit in the Futures market will be $(99.28 - 100.12) \times 2000 = \text{Rs } 1680$

Certain risks are inherent to Derivative strategies viz. lack of opportunities, inability of Derivatives to correlate perfectly with the underlying and execution risks, whereby the rate seen on the screen may not be the rate at which the transaction is executed. For details of risk factors relating to use of Derivatives, the investors are advised to refer to Scheme Specific Risk Factors.

Derivative market: Derivatives markets have grown over the year. There are mainly three types of derivatives in the Indian market.

1. **Interest Rate Swap** - An Interest Rate Swap ("IRS") is a financial contract between two parties exchanging or swapping a stream of interest payments for a "notional principal" amount on multiple occasions during a specified period.
2. **Forward Rate Agreement** - A Forward Rate Agreement ("FRA") is a financial contract between two parties to exchange interest payments for a notional principal amount on settlement date, for a specified period from start date to maturity date.

3. **Interest Rate Futures** - A futures contract is a standardized, legally binding agreement to buy or sell a commodity or a financial instrument in a designated future month at a market determined price (the futures price) by the buyer and seller.

Portfolio Turnover:

Portfolio Turnover is defined as the lower of the value of purchases or sales as a percentage of the average corpus of the Scheme during a specified period. During volatile market conditions portfolio turnover can be expected to be high. Further, the Scheme being an open-ended Scheme, it is expected that there would be a number of Subscriptions and Redemptions on a daily basis. In view of the above, it will difficult to provide an estimate/range with a reasonable measure of accuracy for the anticipated portfolio turnover in the Scheme, but it will be the endeavour of the fund manager to maintain an optimal portfolio turnover rate commensurate with the investment objective of the scheme and purchase/ redemption transactions on an ongoing basis in the scheme.

Risk Control

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various risk measurement tools like but not limited to tracking error, concentration limits, stress test etc. The AMC has systems which enables the fund manager to measure and monitor various risk metrics for all the investments. All investments in unrated papers will be as per the parameters define by the Board of AMC & Trustee Company. Further, all investment in unrated papers are periodically reviewed by Investment Review Committee. Investment Review Committee may from time to time review and define internal norms for the scheme.

Investments by the AMC in the Scheme

Subject to the Regulations and to the extent permitted by SEBI from time to time, the AMC may invest in the Scheme. However, the AMC will not charge investment management fee on such investment in the Scheme.

G. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

S&P BSE 500 TRI

Justification for use of benchmark

The Fund's strategy is to invest in a diversified portfolio of companies across sectors and market capitalization. S&P BSE 500 TRI is an appropriate representation of the Indian market covering major sectors while having a combination of Large-cap, Mid-cap & Small-cap stocks, and hence considered an appropriate benchmark for the Scheme.

Flex SIP Enrolment Details

Scheme Name	XXXX XXXX Fund
Investment Date & Frequency of flex SIP	15th of every month (T)
Fixed instalment amount	Rs. 5,000/-
Number of instalments	36
Total enrolment amount	Rs. 5000 * 36 = Rs. 1,80,000
Period	January 2020 to December 2022

i. How would the Flex SIP instalment be calculated?

Calculation of Flex SIP instalment amount for instance on the date of the fourth instalment i.e. April 15, 2020

o Total units allotted up to the date of previous instalment i.e. March 15, 2020 is assumed as 685.50;

o The NAV of the Scheme on April 13, 2020 (T-2) is assumed as Rs. 18/- per unit;

o Hence the market value of the investment in the Scheme on April 13, 2020 is Rs. 12,339 [685.50 X 18].

The instalment amount will be calculated as follows:

Fixed amount specified at the time of enrolment: Rs. 5,000/-

Or

As determined by the formula: $[(5,000 \times 4) - 12,339/-] =$
Rs.7,661/- whichever is higher

Hence, the instalment amount on April 15, 2020 will be Rs. 7,661/-

ii. How would maximum Flex SIP instalment be calculated?

Calculation of Flex SIP instalment amount for instance on the date of the 7th instalment i.e. July 15, 2020 (T):

o Total units allotted up to the date of previous instalment i.e., June 15, 2020 is assumed as Rs. 1,558.675;

o NAV of the Scheme on July 13, 2020 (T-2) is assumed as Rs. 14/- per unit;

	o Hence the market value of the investment as on July 13, 2020 is Rs. 21,821 [1558.675 X 14]. The instalment amount will be calculated as follows: Fixed amount specified at the time of enrolment: Rs. 5,000/- or As determined by the formula: $[(5,000 \times 7) - 21,821/-] = \text{Rs.}13,179/-$ whichever is higher; subject to 2 times the initial instalment amount Hence, the instalment amount on July 15, 2020 will be Rs. 10,000/-. iii. How would the Flex SIP instalment be calculated vis-à-vis total enrolment amount? In the above illustration, the total enrolment amount for Flex SIP is Rs 1,80,000 (5000 X 36 months). If the total amount invested in Flex SIP till the 34th month is Rs 1,77,000, then the 35th instalment will be Rs. 3000 (Rs. 1,80,000 – Rs. 1,77,000) and the Flex SIP will cease. Flex Systematic Investment Plan

Flex SIP is a facility whereby investors can invest at predetermined intervals in Growth Option of open ended equity oriented schemes (the eligible schemes) of the Fund, higher amount(s) determined by a formula linked to value of investments, to take advantage of market movements. The eligible schemes for Flex SIP investments are subject to change from time to time. Investors are requested to contact nearest ISC of the Fund or email us at clientservice@yesamc.in or visit our website www.yesamc.in for the updated list of eligible schemes. The first Flex SIP instalment (not exceeding Rs. 1 Lakh) will be processed for the fixed amount specified by the Unitholder in the enrolment form. From the second instalment onwards, the investment amount shall be higher of:

Fixed amount to be invested per instalment; or

- The amount determined by the formula: (fixed amount to be invested per instalment X number of instalments including the current instalment) – market value of the investments through Flex SIP 2 Business Days prior to the SIP date.

At any given point in time, the subsequent Flex SIP instalment amount determined by the above formula shall be capped at 2 times the first Flex SIP instalment amount or Rs.1,99,999/- whichever is lower. The instalment amount shall be rounded off to nearest multiple of Re. 1/-. The total amount invested during the tenure of the Flex SIP shall not exceed the total enrolment amount i.e. fixed amount per instalment X total number of instalments under the Flex SIP registration. Thus, the last instalment amount shall be decided accordingly.

Flex SIP Enrolment Details

Scheme Name	XXXX XXXX Fund
Investment Date & Frequency of flex SIP	15th of every month (T)
Fixed instalment amount	Rs. 5,000/-
Number of instalments	36
Total enrolment amount	Rs. 5000 * 36 = Rs. 1,80,000
Period	January 2020 to December 2022

i. How would the Flex SIP instalment be calculated?

	Calculation of Flex SIP instalment amount for instance on the date of the fourth instalment i.e. April 15, 2020 - o Total units allotted up to the date of previous instalment i.e. March 15, 2020 is assumed as 685.50; - o The NAV of the Scheme on April 13, 2020 (T-2) is assumed as Rs. 18/- per unit; - o Hence the market value of the investment in the Scheme on April 13, 2020 is Rs. 12,339 [685.50 X 18]. The instalment amount will be calculated as follows: Fixed amount specified at the time of enrolment: Rs. 5,000/- Or As determined by the formula: $[(5,000 \times 4) - 12,339/-] = \text{Rs. } 7,661/-$ whichever is higher Hence, the instalment amount on April 15, 2020 will be Rs. 7,661/- ii. How would maximum Flex SIP instalment be calculated? Calculation of Flex SIP instalment amount for instance on the date of the 7th instalment i.e. July 15, 2020 (T): - o Total units allotted up to the date of previous instalment i.e., June 15, 2020 is assumed as Rs. 1,558.675; - o NAV of the Scheme on July 13, 2020 (T-2) is assumed as Rs. 14/- per unit; - o Hence the market value of the investment as on July 13, 2020 is Rs. 21,821 [1558.675 X 14]. The instalment amount will be calculated as follows: Fixed amount specified at the time of enrolment: Rs. 5,000/- or As determined by the formula: $[(5,000 \times 7) - 21,821/-] = \text{Rs. } 13,179/-$ whichever is higher; subject to 2 times the initial instalment amount Hence, the instalment amount on July 15, 2020 will be Rs. 10,000/-. iii. How would the Flex SIP instalment be calculated vis-à-vis total enrolment amount? In the above illustration, the total enrolment amount for Flex SIP is Rs 1,80,000 (5000 X 36 months).
--	--

	If the total amount invested in Flex SIP till the 34th month is Rs 1,77,000, then the 35th instalment will be Rs. 3000 (Rs. 1,80,000 – Rs. 1,77,000) and the Flex SIP will cease. An investor has an option to choose from 5 Flex SIP tenures viz. 3 years, 5 years, 10 years, 15 years and 20 years. If a tenure is not chosen, 5 years shall be the default Flex SIP tenure. Segregated Portfolio	In order to ensure fair treatment to all investors in case of a Credit Event and to deal with liquidity risk, SEBI vide its circular no. SEBI/HO/IMD/DF2/CIR/P/2018/160 dated December 28, 2018, as amended from time to time has allowed creation of Segregated Portfolio of debt and money market instruments by mutual fund schemes. Creation of Segregated Portfolio shall be optional and at the sole discretion of the asset management company. The salient features of creation of Segregated Portfolio are as follows: The term 'Segregated Portfolio' shall mean a portfolio, comprising debt or money market instrument affected by a Credit Event, that has been segregated in a mutual fund scheme. The term 'Main Portfolio' shall mean the scheme portfolio excluding the Segregated Portfolio. The term 'Total Portfolio' shall mean the scheme portfolio including the securities affected by the Credit Event. The AMC at its sole option and discretion may create Segregated Portfolio in the Scheme, with the approval of the Trustees, subject to the following: Segregated portfolio may be created, in case of a Credit Event at issuer level as under: Downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA) as under:

	a. Downgrade of a debt or money market instrument to 'below investment grade', or b. Subsequent downgrades of the said instruments from 'below investment grade', or c. Similar such downgrades of a loan rating; or • Trigger of a pre-specified event for loss absorption in case of debt instruments with special features such as subordination to equity (absorption of losses before equity capital and /or conversion to equity) • Any other scenario as permitted by SEBI from time to time. In case of difference in rating by multiple CRAs, the most conservative rating shall be considered. Creation of Segregated Portfolio shall be based on issuer level Credit Events as detailed above and implemented at the ISIN level. Further, Segregated Portfolio may be created of unrated debt or money market instruments of an issuer that does not have any outstanding rated debt or money market instruments but only in case of actual default of either the interest or principal amount and subject to guidelines prescribed by SEBI in this behalf from time to time. It may be noted that even for the same security (ISIN level) held by multiple Schemes, the AMC, in its sole discretion, may decide to segregate the portfolio only for select Schemes. In case of debt instruments with special features mentioned above, if the instrument is to be written off or converted to equity pursuant to any proposal, the date of said proposal may be treated as the Trigger Date. However, if the said instruments are written off or converted to equity without proposal, the date of write off or conversion of debt instrument to equity may be treated as the Trigger Date. It may be noted that notwithstanding the above, segregation of portfolio may be effected in such events and in such manner as may be permitted by SEBI whether by changes to circulars or guidelines in this behalf or by way of clarifications issued thereto from time to time or in any other manner. Process for creation of Segregated Portfolio: a) In case the AMC decides on creation of Segregated Portfolio on the day of a Credit Event / Trigger Date in case of debt instruments with special features it shall: (i) seek approval of trustees prior to creation of the Segregated Portfolio. (ii) immediately issue a press release disclosing its intention to segregate such debt and money market instrument and its impact on the investors and also disclose that the segregation shall be subject to trustee approval. Additionally, the said press release
--	--

	shall be prominently disclosed on the website of YES Mutual Fund ("the Fund"). (iii) ensure that till the time the trustee approval is received, which in no case shall exceed 1 Business Day from the day of Credit Event, the subscription and redemption in the scheme(s) shall be suspended for processing with respect to creation of units and payment on redemptions. b) Process post receipt of trustee approval by the AMC for creation of Segregated Portfolio in the Scheme(s): i. Segregated Portfolio shall be effective from the day of Credit Event ii. The AMC shall issue a press release immediately with all relevant information pertaining to the Segregated Portfolio. The said information will also be submitted to SEBI. iii. An e-mail or SMS shall be sent to all unit holders of the concerned scheme(s). i. The NAV of both segregated and Main Portfolio of the Scheme(s) shall be disclosed from the day of the Credit Event. ii. All existing investors in the scheme(s) as on the day of the Credit Event shall be allotted equal number of units in the Segregated Portfolio as held in the Main Portfolio. ii. No redemption and subscription shall be allowed in the Segregated Portfolio. However, in order to facilitate exit to unit holders in Segregated Portfolio, the AMC shall enable listing of units of Segregated Portfolio on the recognized stock exchange within 10 working days of creation of Segregated Portfolio and also enable transfer of such units held in Demat mode on receipt of transfer requests. c) If the trustees do not approve the proposal to Segregate Portfolio, the AMC shall issue a press release immediately informing investors of the same. Valuation and processing of subscriptions and redemptions a) Notwithstanding the decision to segregate the debt and money market instrument, the valuation shall take into account the Credit Event and the portfolio shall be valued based on the principles of fair valuation (i.e. realizable value of the assets) in terms of the relevant provisions of SEBI (Mutual Funds) Regulations, 1996 and Circular(s) issued thereunder. b) All subscription and redemption requests for which NAV of the day of Credit Event or subsequent day is applicable will be processed as per the existing circular on applicability of NAV as under:
--	---

	i. Upon trustees' approval to create a Segregated Portfolio – - Investors redeeming their units will get redemption proceeds based on the NAV of Main Portfolio and will continue to hold the units of Segregated Portfolio. - Investors subscribing to the scheme(s) will be allotted units only in the Main Portfolio based on its NAV. ii. In case trustees do not approve the proposal of Segregated Portfolio, subscription and redemption applications will be processed based on the NAV of Total Portfolio. TER for the Segregated Portfolio a) The AMC will not charge investment and advisory fees on Segregated Portfolio. However, TER (excluding the investment and advisory fees) may be charged, on a pro-rata basis only upon recovery of the investments in Segregated Portfolio. b) The TER so levied shall not exceed the simple average of such expenses (excluding the investment and advisory fees) charged on daily basis on the Main Portfolio (in % terms) of the scheme(s) during the period for which Segregated Portfolio was in existence. c) The legal charges related to recovery of the investments of the Segregated Portfolio may be charged to the Segregated Portfolio in proportion to the amount of recovery. However, the same shall be within the maximum TER limit as applicable to the Main Portfolio. The legal charges in excess of the TER limits, if any, shall be borne by the AMC. d) The costs related to Segregated Portfolio shall in no case be charged to the Main Portfolio. Periodic Disclosures: In order to enable the existing as well as the prospective investors to take informed decision, inter alia the following disclosures shall be made: a) A statement of holding indicating the units held by the investors in the Segregated Portfolio along with the NAV of both Segregated Portfolio and Main Portfolio as on the day of the Credit Event shall be communicated to the investors within 5 working days of creation of the Segregated Portfolio. b) Adequate disclosure of the Segregated Portfolio shall appear in the scheme related documents, in monthly and half-yearly portfolio disclosures and in the annual report of the Scheme. c) Net Asset Value (NAV) of Segregated Portfolio, if any, shall be declared on daily basis. d) Investors of the Segregated Portfolio shall be duly informed of the recovery proceedings of the investments of the Segregated Portfolio. Status update may be provided to the investors at the time of recovery and also at the time of writing-off of the segregated securities. Risk factors associated with Creation of Segregated Portfolio
--	---

- a) Investor holding units of Segregated Portfolio may not be able to liquidate their holding till recovery of money from the issuer.
- b) Security comprising Segregated Portfolio may not realise any value.
- c) Listing of units of Segregated Portfolio on recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

Given below is an illustration explaining the segregation of portfolio:

Scheme Portfolio before the Credit Event

Assets	Amount (Rs.)
Debt A	50,000
Debt B	50,000
Debt C	50,000
Net Assets	1,50,000

Assuming number of units outstanding is 10,000 units

NAV = Net Assets / No of units = 150,000/10,000= Rs.15/-

There is a Credit Event in one of the Security (Debt C). Due to Credit Event the Debt C is valued at Rs. 25,000/- in line with extant SEBI regulations on valuation of such securities. AMC decides to segregate portfolio by segregating exposure in Debt C. The resultant split will be as follows:

Scheme Main Portfolio

Assets	Amount (Rs.)
Debt A	50,000
Debt B	50,000
Net Assets	100,000

NAV (Main Portfolio) = 100,000/10,000= Rs.10/-

Scheme Segregated Portfolio

Assets	Amount (Rs.)
Debt C	25,000
Net Assets	25,000

NAV (Segregated Portfolio) = Rs. 25,000/10,000= Rs.2.5/-

Investor (having 1000 units) will see his scheme holdings as follows:

Particulars	Before Credit Event	After Credit Event	
		Main Portfolio	Segregated Portfolio

	Market Value of Units (Rs.)	15,000	10,000	2500
	No of Units	1000	1000	1000
	NAV per unit (Rs.)	15.00	10.00	2.50
Monitoring by Trustees In order to ensure timely recovery of investments of a Segregated Portfolio, if any, the trustees would continuously monitor the progress and take suitable action as they deem appropriate. Trustees shall ensure that the AMC puts in sincere efforts to recover the investments of the segregated portfolio and that upon recovery of money, whether partial or full, it shall be immediately distributed to the investors in proportion to their holding in the segregated portfolio. Any recovery of amount of the security in the segregated portfolio even after the write off shall be distributed to the investors of the segregated portfolio. In order to avoid mis-use of Segregated Portfolio, Trustees shall ensure that a mechanism is put in place which will negatively impact the performance incentives of Fund Managers, Chief Investment Officers (CIOs), etc. involved in the investment process of securities under the Segregated Portfolio, mirroring the existing mechanism for performance incentives of the AMC, including claw back of such amount to the Segregated Portfolio of the Scheme.				
Mandatory Updation of Know Your Customer (KYC) requirements for processing of mutual fund transactions	Financial transactions (including redemptions, switches and all types of systematic plans) and non-financial requests will not be processed if the unit holders have not completed KYC requirements. Further, upon updation of PAN details with the KRA (KRA-KYC)/CERSAI (CKYC), the unit holders are requested to intimate us/our Registrar and Transfer Agent their PAN information along with the folio details for updation in our records. Email Communication: If the investor has provided an email address, the same will be registered in YES Asset Management (India) Limited ("YES AMC") records and will be treated as his consent to receive allotment confirmations, account statement, annual report/abridged summary and any statutory/other information as permitted via electronic mode/email. Unit holder who wish to receive these documents in physical mode may email us on clientservice@yesamc.in or call us on 1800 3000 3060. 	Notes: - Investor may be entitled to treaty benefit on furnishing the following documents: - Valid Tax Residency Certificate (TRC) obtained from the tax authorities of the country of which the investor is a resident - Self-declaration in Form 10F - Self-declaration of having no Permanent Establishment in India, beneficial ownership of income and eligibility to claim treaty benefit - In the absence of PAN of a non-resident, section 206AA provides for TDS at a higher rate of 20%. However, the said section would not apply in respect of <i>inter alia</i> dividend and payments on transfer of any capital asset, if the following documents as listed in Rule 37BC are furnished: - name, e-mail id, contact number; - address in the country or specified territory outside India of which the taxpayer is a resident; - Tax Residency Certificate; - Tax Identification Number/ Unique Identification Numbers. - Unlike section 195 of the, which provides for withholding tax at the 'rates in force', certain sections like 196D(1A), 196B, etc. provide for a flat rate of TDS in the section itself. The term 'rates in force' as defined u/s 2(37A) of the Act <i>inter alia</i>, provides that for the purpose of deduction of tax u/s 195, the rate specified in this behalf in the Finance Act or rate specified in the relevant DTAA, whichever is more beneficial to the taxpayer would be applicable by virtue of section 90(2). Thus, for the purpose withholding tax u/s 195, the 'rates in force' expressly refers to the benefit (if any) under the relevant treaty, which is not the case where blanket rate is provided in the section itself. Thus, for the purpose of withholding tax, treaty benefit may not be available in such cases. - The investors can claim credit of any tax withheld by Mutual Fund in accordance with section 199 of the Act. - Equity Oriented Funds will also attract Securities Transaction Tax at applicable rates. The information merely sets out a gist of possible tax implications on investing in equity-oriented scheme of the Mutual Fund. For further details on taxation, please refer to the Section on Taxation on investing in Mutual Funds in Statement of Additional Information [SAI]. The information is based on the tax laws in force. Investors should be aware that the fiscal rules/ tax laws may change and there can be no guarantee that the current tax position may continue indefinitely. Investors are advised to consult their tax advisors with respect to the tax implications arising out of their participation in the schemes.

D. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit of the Scheme for each option will be computed by dividing the net assets of the Scheme by the number of units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time. The NAV of the Units under the Scheme will be calculated on a daily basis as shown below:

The NAV of the Units under the Scheme will be calculated on a daily basis as shown below:

$$\text{NAV per unit (Rs.)} = \frac{(\text{Market / Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions})}{\text{No. of units outstanding under the Scheme / Option on the valuation day}}$$

Example: If the applicable NAV is Rs. 10.00, sales/entry load is 2 per cent and the exit/repurchase load is 2 percent then the sales price will be Rs. 10.20 and the repurchase price will be Rs. 9.80. The NAV shall be calculated up to two decimal places. However the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Plan/Option. The NAVs of the Growth Option and the IDCW Option will be different after the declaration of the first Dividend. The AMC will calculate and disclose the NAV of the Scheme on all the Business Days.
