### C. WHAT ARE THE INVESTMENT STRATEGIES? (Consolidated Std. Obs. 27)(Std. Obs.7)

The Scheme shall be managed actively.

The scheme will seek to achieve its investment objective primarily by employing various strategies which seek to exploit available arbitrage opportunities in markets.

#### DERIVATIVES STRATEGY (Std. Obs. 5)

The arbitrage strategies the Fund may adopt could be as under. The list is not exhaustive, and the Fund could use similar strategies and any other strategies as available in the markets.

The fund will primarily take advantage of mispricing between equity spot and derivative markets:

#### 1. **Cash–Futures Arbitrage Strategies**

- Buy in cash market, sell in futures (when futures > spot).
- Lock in spread till expiry or unwind early if profitable.
- Rollover to next-month contracts when spreads are attractive.
- **Reverse Cash–Futures Arbitrage Strategy**
  - If futures trade at discount, short spot (via stock borrowing) and go long futures.
- **Index vs Stock Futures Arbitrage Strategies**
  - Identify divergences between index futures and constituent stock basket.
  - Trade mispricing with strict risk controls.

#### 2. **Corporate Action/ Event-Driven Strategies**

- **Buyback / Open Offer Arbitrage:** Participate when buyback price > market price.
- **Merger / Demerger Arbitrage:** Exploit price differentials in merging entities vs swap ratio.
- **Dividend Arbitrage:** Capture tax/timing-related dividend mispricing.

#### 3. **Complimentary Strategies**

- **Debt**  
Deploy idle cash in short-term debt instruments (T-Bills, G-Secs) to generate risk-free yield.
- **ReITs / InvITs**  
Use selective positions in liquid InvITs/ReITs for yield pick-up

Illustration of a Cash Futures Arbitrage Strategy :-

Buy 100 shares of Company X at Rs 1000 and sell the same quantity of stock's futures of the Company X at Rs 1100.

1. Market goes up and the price on the expiry day is Rs 2000.  
At the end of the month (expiry day) the futures expires automatically:  
Settlement price of futures = closing spot price = Rs 2000  
Gain on stock is  $100 \times (2000 - 1000) = \text{Rs } 100,000$   
Loss on futures is  $100 \times (1100 - 2000) = \text{Rs } -90,000$   
Net gain is  $100,000 - 90,000 = \text{Rs } 10,000$
2. Market goes down and the price on the expiry day is Rs 500.  
At the end of the month (expiry day) the futures expires automatically:  
Settlement price of futures = closing spot price = Rs 500  
Loss on stock is  $100 \times (500 - 1000) = \text{Rs } -50,000$   
Gain on futures is  $100 \times (1100 - 500) = \text{Rs } 60,000$   
Net gain is  $60,000 - 50,000 = \text{Rs } 10,000$

Unwinding the position:

Buy 100 shares of Company X at Rs 1000 and sell the same quantity of stock's futures of the Company X at Rs 1100.

The market goes up and at some point of time during the month (before expiry) the stock trades at Rs 1200 and the futures trades at Rs 1190 then we unwind the position:

Buy back the futures at Rs 1190:  
loss incurred is  $(1100 - 1190) \times 100 = \text{Rs } -9,000$   
Sell the stock at Rs 1200: gain realized:  $(1200 - 1000) \times 100 = \text{Rs } 20,000$   
Net gain is  $20,000 - 9,000 = \text{Rs } 11,000$

**Though every endeavour will be made to achieve the objective of the Scheme, the AMC/Sponsor/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.**

### **Risk Control:**

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various risk measurement tools like but not limited to tracking error, concentration limits, stress test etc. The AMC has systems which enables the fund manager to measure and monitor various risk metrics for all the investments. Investment Review Committee may from time to time review and define internal norms for the scheme

### **Portfolio Turnover Policy:**

The Scheme is an open-ended scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

Portfolio turnover in the scheme(s) will be a function of market opportunities. It is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. The AMC will endeavour to optimize portfolio turnover to optimize risk adjusted return keeping in mind the cost associated with it. A high portfolio turnover rate is not necessarily a drag on portfolio performance and may be representative of investment opportunities that exist in the market.

**D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE (Consolidated Std. Obs.25)(Std. Obs.9)**

**Benchmark (Total Returns Index):** Nifty 50 Arbitrage TRI. As required under clause 1.9 of Master Circular, the benchmark has been selected from amongst those notified by AMFI as the first tier benchmark to be adopted by mutual funds and which are reflective of the category of the scheme.

The Nifty 50 Arbitrage TRI has a composition similar to the asset allocation and strategy of the Old Bridge Arbitrage Fund; hence it is a suitable benchmark for the fund. The Total Return (TR) Version of the Index will be used for performance comparison.

The Trustee/AMC reserves the right to change the benchmark for evaluating the performance of the Scheme from time to time, in conformity with the investment objective of the Scheme and the appropriateness of the benchmark, subject to SEBI guidelines and other prevalent guidelines.

### PART III- OTHER DETAILS

#### A. COMPUTATION OF NAV

The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) of the Units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\begin{array}{l} \text{Market or Fair} \\ \text{value of scheme's} \\ \text{Investments} \end{array} + \begin{array}{l} \text{Current Assets including} \\ \text{accrued income} \end{array} - \begin{array}{l} \text{Current Liabilities} \\ \text{and provisions} \end{array}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

Illustration on Computation of NAV: If the net assets of the Scheme are Rs. 10,55,55,000.00 and units outstanding are 1,00,00,000 then the NAV per unit will be computed as follows: 10,55,55,000.00 / 1,00,00,000 = Rs. 10.56 per unit (up to two decimal). (Consolidated Std. Obs.42)

#### NAV Information

As required under the Regulations, the fund shall ensure that the repurchase price of an open ended scheme is not lower than 95% of the Net Asset Value. ## SECTION II

### **I. Introduction**

#### **A. Definitions/interpretation**

For detailed description on Definitions/Interpretation, investors are requested to refer the following link on our website: <https://oldbridgemf.com/statutory-disclosures.html#v-pills-tabContent4>

#### **B. RISK FACTORS [Std. Obs.2]**

For Standard Risk Factors, kindly refer Statement of Additional Information (SAI).

#### **Scheme Specific Risk Factors: [Consolidated Std. Obs. 08]**

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

##### **i. Risk associated with Scheme's Arbitrage Strategy**

- The primary objective of the Fund Manager is to identify investment opportunities and to exploit price discrepancies in cash and derivative segments of the market. These investments by nature are volatile as the prices of the underlying securities are affected by various factors such as liquidity, time to settlement date, news flow, spreads between cash and derivatives market at different points of time, trading volumes, etc. There is no assurance that the Fund Manager will be able to spot investment opportunities or correctly exploit price discrepancies in the different segments of the market.
- The Scheme is also expected to have a high portfolio churn, especially in a volatile market. Also, the Scheme proposes to execute arbitrage transactions in various markets simultaneously, this may result in high portfolio turnover and, consequently, high transaction cost.
- There is an execution risk while implementing arbitrage strategies across various segments of the market, which may result in missed investment opportunities, or may also result in losses/high transaction costs.
- While future market is typically more liquid than underlying cash market, there can be no assurance that ready liquidity would exist at all point in time for the scheme to purchase and close out a specific future contract. There may be instances, where the price spread between cash and derivative market is insufficient to meet the cost of carry. Such scenarios may potentially impact on the performance of the Scheme.

##### **ii. Risk associated with schemes investing in equities:**

- The scheme proposes to invest in equity and equity related instruments. Equity instruments by nature are volatile and prone to price fluctuations on a daily basis due to both micro and macro factors. The value of Equity and Equity related instruments may fluctuate due to factors affecting securities market such as volume and volatility in equity markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, general decline in the Indian Markets which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAVs of the Units issued under the Scheme may be adversely affected.
- Investments in equity shares and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks.
- Investors may note that AMC/Fund Manager's investment decisions may not be always profitable. Although it is intended to generate capital appreciation and maximize the returns by actively investing

in equity/ equity related securities and utilising debt and money market instruments as a defensive investment strategy.

- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. and may lead to the Scheme incurring losses till the security is finally sold.
- Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods, and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Scheme can go up and down because of various factors that affect the capital markets in general.
- Securities which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges
- Further, the volatility of medium / small - capitalization stocks may be higher in comparison to liquid large capitalization stocks.

### iii. Risk Associated with Investing in Fixed Income / Money Market Instruments:

- **Interest-Rate Risk:** Fixed income securities and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest, credit quality, demand and supply. However, in case of Government securities credit risk remains zero, their prices are influenced by the movement in interest rates in the financial system.  
In case of floating rate instruments, an additional risk could arise because of changes in spreads of floating rate instruments. With increase in spread of floating rate instruments, the price can fall and with decrease in spread of floating rate instruments, the prices can rise. Moreover, the floating rate instruments having a periodical interest rate reset carry lower interest rate risk compared to a fixed rate debt security. However, in the falling interest rate scenario, the returns on floating rate debt instruments may not be better than those on fixed rate debt instruments.
- **Credit Risk:** This risk means that the issuer of a debenture/bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer/instrument goes down. Different types of securities in which the scheme(s) would invest as given in the scheme information document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
- **Re-investment Risk:** This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Scheme including maturity proceeds are reinvested. Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.
- **Basis Risk:** During the life of a floating rate security or a swap, the underlying benchmark index may become less active and may not capture the actual movement in interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio.
- **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Liquidity Risk:** The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

- **Liquidity Risk on account of unlisted securities:** The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.
- **Settlement Risk:** Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.
- **Other Risk:** In case of downward movement of interest rates, floating rate debt instruments will give a lower return than fixed rate debt instruments.

iv. **Risk factors with investing in Derivatives:** **Consolidated Std. Obs. 28) (Std Obs.5)**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. As and when the Scheme trade in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand.

Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counter party”) to comply with the terms of the derivatives contract.

**The specific risk factors arising out of a derivative strategy used by the Fund Manager may be as below:**

- Lack of opportunity available in the market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

- **Risks associated with Covered Call Strategy:**

The risk associated with covered calls is the loss of upside, i.e. if the shares are assigned (called away), the option seller forgoes any share price appreciation above the option strike price.

The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock. The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.

The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received the scheme would be at a loss.

**v. Risks associated with segregated portfolio**

- Liquidity risk – A segregated portfolio is created when a credit event / default occurs at an issuer level in the scheme. This may reduce the liquidity of the security issued by the said issuer, as demand for this security may reduce. This is also further accentuated by the lack of secondary market liquidity for corporate papers in India. As per SEBI norms, the scheme is to be closed for redemption and subscriptions until the segregated portfolio is created, running the risk of investors being unable to redeem their investments. However, it may be noted that, the proposed segregated portfolio is required to be formed within one day from the occurrence of the credit event.
- Investors may note that no redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in segregated portfolio, AMC shall list the units of the segregated portfolio on a recognized stock exchange within 10 Business days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer requests. For the units listed on the exchange, it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units. There is no assurance that an active secondary market will develop for units of segregated portfolio listed on the stock exchange. This could limit the ability of the investors to resell them. There may be possibility that the security comprising the segregated portfolio may not realize any value.
- Valuation risk - The valuation of the securities in the segregated portfolio is required to be carried out in line with the applicable SEBI guidelines. However, it may be difficult to ascertain the fair value of the securities due to absence of an active secondary market and difficulty to price in qualitative factors.

**vi. Risks associated with investing in Tri-party Repo (TREPS) through CCIL**

The Mutual Fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India Limited (CCIL). All transactions of the Mutual Fund in government securities and in Tri- party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The Mutual Fund is exposed to the extent of its contribution to the default fund of CCIL at any given point in time i.e. in the event that the default waterfall is triggered and the contribution of the Mutual Fund is called upon to absorb settlement/default losses of another member by CCIL, the Scheme may lose an amount equivalent to its contribution to the default fund. Further, it may be noted that CCIL periodically prescribes a list of securities eligible for contributions as collateral by members. Presently, all Central Government securities and Treasury bills are accepted as collateral by CCIL. The risk factors may undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral.

**vii. Performance Risk**

Performance risk refers to the risk of a scheme being unable to generate returns matching / above the returns of the scheme's benchmark. It would also mean the scheme underperforming against its peer set of other mutual fund schemes having similar portfolios, scheme classification, objective, benchmark and asset allocation. These risks could arise due to a variety of market and economic activities, government policies, global economic changes, currency fluctuations, tax policies, political changes, corporate actions and investors' behaviour.

**viii. Risks associated with 'Restriction on Redemption in Mutual Funds'**

Subject to the approval of Board of Directors of the AMC and Trustee Company and immediate intimation to SEBI, a restriction on redemptions may be imposed by the Scheme under certain exceptional circumstances, which the AMC / Trustee believe that may lead to a systemic crisis or event that constrict liquidity of most securities or the efficient functioning of markets. Please refer to the paragraph "Restrictions, if any, on the right to freely retain or dispose of Units being offered" for further details including the procedure to be followed while imposing restriction on redemptions.

**ix. Risks Factors associated with transaction in Units through stock exchange(s)**

In respect of transaction in units of the Scheme through stock exchange platform(s), allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by the stock exchange(s) and their respective clearing corporations on which the Fund has no control.

**x. Risks associated with investments in mutual fund units:**

To the extent of the investments made by the scheme in mutual funds units, the risks associated with investing in such funds like market risk, credit & default risk, liquidity risk, redemption risk including the possible loss of principal; etc. will exist.

**xi. Risk Factors Associated with Securities Lending (Std. Obs. 6)**

As with other modes of extensions of credit, there are risks inherent to securities lending. During the period the security is lent, the Scheme may not be able to sell such security and in turn cannot protect from the falling market price of the said security Under the current securities lending and borrowing mechanism, the Scheme can call back the securities lent any time before the maturity date of securities lending contract. However, this will be again the function of liquidity in the market and if there are no lenders in the specified security, the Scheme may not be able to call back the security and in the process, the Scheme will be exposed to price volatility. Moreover, the fees paid for calling back the security may be more than the lending fees earned by Scheme at the time of lending the said security and this could result in loss to the Scheme. Also, during the period the security is lent, the Fund will not be able to exercise the voting rights attached to the security as the security will not be registered in the name of the Scheme in the records of the Depository/issuer.

**xii. Risk associated with Investments in ReITs and InvITs**

- Price-Risk or Interest-Rate Risk: ReITs & InvITs run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.
- Credit Risk: In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. ReITs & InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre-scheduled.
- Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. As these products are new to the market they are likely to be exposed to liquidity risk.
- Reinvestment Risk: Investments in ReITs & InvITs may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

- **Risk of lower than expected distributions:** The distributions by the ReIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the ReIT/ InvITs receives as dividends or the interest and principal payments from portfolio assets.

The above are some of the common risks associated with investments in ReITs & InvITs. There can be no assurance that investment objectives will be achieved, or that there will be no loss of capital. Investment results may vary substantially on a monthly, quarterly or annual basis.

**C. RISK CONTROL/ RISK MITIGATION STRATEGY (Consolidated Std. Obs. 09)**

Risk is an important part of the investment functions. Effective Risk Management is critical to Fund Management for achieving financial goals. Investments made by the Scheme shall be made in accordance with Investment Objective of the Scheme and provisions of SEBI (Mutual Funds) Regulations.

The Fund has identified following Risk and designed Risk Management Strategies, which is the part of the Investment Process to manage such risks.

**Risk Associated with Equity & Equity Related Instruments**

Type of Risk	Risk Mitigation Measures
Volatility Risk	Monitor sector / company exposure at portfolio level.
Concentration Risk	Diversify across stocks / sectors, concentration risk can be reduced.  The fund manager will endeavour to build well diversified portfolio within the overall fund specific investment strategy which will help in controlling concentration risk.
Liquidity Risk	The fund manager will aim at taking exposure only into liquid stock/ derivatives where there will be minimal risk to square off the transaction. This ensures that the liquidity risk in the portfolio is minimized.

**Risk Associated with Debt & Money Market Instruments**

Type of Risk	Risk Mitigation Measures
Interest Rate Risk	In a rising interest rates scenario, the Fund Manager will endeavour to increase investment in money market securities whereas if the interest rates are expected to fall, the allocation to debt securities with longer maturity will be increased thereby mitigating risk to that extent.
Liquidity Risk	The liquidity and volatility of a security is an important criterion in security selection process. This ensures that liquidity risk is managed.
Credit and Default Risk	The Scheme shall invest a major portion of its debt investments in Government Securities thus lowering the overall credit risk in the portfolio.
Reinvestment Risk	The Fund Manager shall manage reinvestment risk by investing in securities with relatively low intermittent cash flows.

**Risk Associated with Units issued by ReITs & InvITs**

Type of Risk	Risk Mitigation Measures
--------------	--------------------------

Market Risk and Interest Rate Risk:	This risk will be managed by capping allocation, actively monitoring the duration of ReIT and InvITs holdings, and reducing exposure in a rising interest rate environment.
Liquidity Risk:	Liquidity concerns will be addressed by investing only in large and liquid ReITs and InvITs, entering and exiting positions in a staggered manner, and maintaining sufficient liquidity buffers.
Concentration Risk:	Concentration risk will be reduced by diversifying investments across multiple available ReITs and InvITs, sectors and geographies.
Fundamental Risk:	These risks will be mitigated by conducting thorough due diligence of the issuers and by continuously monitoring quarterly performance, announcements, and regulatory changes.
