1. Data includes funds raised through public issue, private placement, preferential issue, institutional placement, rights issue
2. IPOs are classified based on listing date and public debt issues on the basis of closing date of the issue.
3. Since, some issue have components of both fresh issues as well as OFS, the number of issues with fresh issues and OFS is not given.
4. The amount raised through fresh issues and OFS are obtained by multiplying the respective number of shares issued with the issue price.
5. The financial sector includes institutions, instruments, markets, as well as the legal and regulatory framework that permit transactions to be made by extending credit. Entity that is principally engaged in providing financial services, such as financial intermediation, financial risk management or liquidity transformation are considered financial corporations. Thus the financial sector includes (list is indicative and not exhaustive):

a. Banks
b. NBFCs
c. HFCs
d. insurance corporations
e. pension funds
f. foreign exchange companies
g. State Financial Corporations
h. ARCs

All others are considered under non-financial sector.

1. Beta & R2 are calculated for the trailing 12 months .Beta measures the degree to which any portfolio of stocks is affected as compared to the effect on the market as a whole.

2. The coefficient of determination (R2) measures the strength of relationship between two variables the return on a security versus that of the market.

3. Volatility is the standard deviation of the daily returns for the trailing 12 months.

4. Impact cost is calculated as the difference between actual buy price and ideal buy price, divided by ideal buy price, multiplied by 100. Hence ideal price is calculated as (best buy + best sell)/2.

5. The above is calculated for a month for the portfolio size of Rs. 5 lakh. It is calculated for the current month.

Notes: 1. Beta & R2 are calculated for the the trailing 12 months. Beta measures the degree to which any portfolio of stocks is affected as compared to the effect on the market as a whole.

2. The coefficient of determination (R2) measures the strength of relationship between two variables the return on a security versus that of the market.

3. Volatility is the standard deviation of the daily returns for the the trailing 12 months.

4. Impact cost is calculated as the difference between actual buy price and ideal buy price, divided by ideal buy price, multiplied by 100. Hence ideal price is calculated as (best buy + best sell)/2.

5. Impact Cost for Nifty 50 is for a portfolio of ₹50 lakh and is weighted average impact cost.

6. Shriram Finance Ltd replaced UPL Ltd in the benchmark Nifty50 index, effective from March 28

$ indicates till May 25

Note:

1 Option here refers to 'Option on commodity Futures'

2. Closing prices have been considered for the most active contract at the end of month

3. Average Daily OI and Values of Contract have been derived by taking the sum of end of day OI and then dividing by no. of trading days during the month. (Deepavali Muhurat trading is not counted as trading day)

4. Options Turnover is based on Notional value.
