Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) of the Units will be calculated on every Business Day and for such other days as may be required for the purpose for transaction of Units. The NAV shall be calculated in accordance with the following formula, or such other formula as may be prescribed by SEBI from time to time:

$$\text{NAV} = \frac{\text{Market or Fair Value of the Scheme's Investments+ Receivables+ Accrued Income+ Other Assets- Accrued Expenses- Payables- Other Liabilities}}{\text{Number of Units Outstanding}}$$

The NAV of the Scheme will be calculated and declared upto Four decimal places & the fourth decimal will be rounded off higher to the next digit if the fifth decimal is or more than 5 i.e., if the NAV is Rs. 10.45347 it will be rounded off to Rs. 10.4534.

Illustration of NAV:

If the net assets of the Scheme, after considering applicable expenses, are Rs.10,45,34,345.34 and units outstanding are 10,00,0000, then the NAV per unit will be computed as follows: 10,45,34,345.34 / 10,00,000 = Rs. 10.4534 per unit (rounded off to four decimals).

The Mutual Fund will ensure that the repurchase price will not be lower than 95% of the Applicable NAV

For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI.

I. Introduction

A. Definitions/interpretation

For detailed description please refer -

B. Risk factors

Scheme Specific Risk Factors

The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc. Some of the Risks are listed below:

1. Risks Associated with investing in Money Market Instruments

- **Interest rate Risk:** Price of a fixed income instrument generally falls when the interest rates move up and vice-versa. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Credit risk or default Risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and/or principal payment obligations. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.
- **Liquidity & Settlement Risk:** The liquidity of a fixed income security may change, depending on market conditions leading to changes in the liquidity premium attached to the price of such securities. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio. Different segments of the financial markets have different settlement cycle/periods and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. This can adversely affect the ability of the Fund to swiftly execute trading strategies which can lead to adverse movements in NAV.
- **Reinvestment Risk:** Interest rates may vary from time to time. The rate at which intermediate cash flows are reinvested may differ from the original interest rates on the security, which can affect the total earnings from the security.
- **Performance Risk:** Performance of the Scheme may be impacted with changes in factors, which affect the capital market and in particular the debt market.

- **Prepayment Risk:** The Scheme may receive payment of monthly cashflows earlier than scheduled, which may result in reinvestment risk.
- **Market Risk:** Lower rated or unrated securities are more likely to react to developments affecting the market as they tend to be more sensitive to changes in economic conditions than higher rated securities

2. Risk Factors associated with Scheme:

a. Passive Investments:

As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select securities or to take defensive positions in declining markets.

b. Tracking Error Risk:

Tracking Error is divergence of the performance (return) of the Fund's portfolio from that of the Underlying Index. Based on that the availability of issuances by the CPSEs/CPSUs/CPFIs and other Government organizations, it is expected that the Portfolio allocation could be different than that of underlying index allocation and could result in Tracking Error. That said, the risk parameters of the portfolio of the Scheme and underlying index could be similar.

The Fund will endeavor to keep the tracking error as low as possible.

Tracking error could be the result of a variety of factors including but not limited to:

- Delay in the purchase or non-availability of PSUs securities which are part of the Index
- Delay in liquidation of PSUs bonds which have been removed by the Index
- Due to timing of transactions either on RFQ platforms or in open market
- Due to investment in out of index investments such as Government securities, Repo in Government securities and TREPS
- Due to over-weight / under-weight investment in bonds of eligible PSUs issuers at ISIN level which are part of the Index
- Due to mismatch in the weight of the issuers forming part of the Index and the Scheme.
- Change in asset allocation between the Index and the Scheme in the last year of the Scheme.
- Difference in valuation of underlying bonds by the Index Provider and AMC's valuation providers.

c. Trade Execution Risk on RFQ Platforms:

Current SEBI regulations mandates Mutual Funds to execute certain % of their monthly trading volume in corporate bonds on RFQ platforms. RFQ platforms are peer-to-peer platforms and are still in development stage. Therefore, they have lower level of secondary market liquidity. Mandatory execution of trades on RFQ among MFs may hamper trade execution efficiency during periods of heavy outflows.

3. Risks Associated with Stock Lending

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary

to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. It may be noted that this activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends, rendering the value of collateral inadequate until such time as that diminution in value is replenished by additional security. It is also possible that the borrowing party and/or the approved intermediary may suddenly suffer severe business setback and become unable to honour its commitments. This, along with a simultaneous fall in value of collateral would render potential loss to the Scheme. Besides, there can be temporary illiquidity of the securities that are lent out and the Scheme will not be able to sell such lent out securities until they are returned. There is also a possibility of Opportunity loss.

4. Risks Associated with exposure in Tri-party Repo

Risk of exposure in the Tri-party Repo settlement Segment provided by CCIL emanates mainly on two counts –

- 1) Risk of failure by a lender to meet its obligations to make funds available or by a borrower to accept funds by providing adequate security at the settlement of the original trade of lending and borrowing under Tri-party Repo transaction.
- 2) Risk of default by a borrower in repayment.

5. Risk Associated with Repo transactions in Corporate Debt

- **Lending transactions:** The scheme may be exposed to counter party risk in case of repo lending transactions in the event of the counterparty failing to honour the repurchase agreement. However, in repo lending transactions, the collateral may be sold and a loss is realized only if the sale price is less than the repo amount. The risk may be further mitigated through over-collateralization (the value of the collateral being more than the repo amount). Further, the liquidation of underlying securities in case of counterparty default would depend on liquidity of the securities and market conditions at that time. It is endeavoured to mitigate the risk by following an appropriate counterparty selection process, which include their credit profile evaluation and over-collateralization to cushion the impact of market risk on sale of underlying security.
- **Borrowing transactions:** In the event of the scheme being unable to pay back the money to the counterparty as contracted, the counter party may dispose of the assets (as they have sufficient margin). This risk is normally mitigated by better cash flow planning to take care of such repayments. Further, there is also a Credit Risk that the Counterparty may fail to return the security or Interest received on due date. It is endeavoured to mitigate the risk by following an appropriate counterparty selection process, which include their credit profile evaluation.

6. Risks Associated with segregated portfolio

- 1) Unit holder holding units of Segregated Portfolio may not able to liquidate their holdings till the recovery of money from the issuer.
- 2) Portfolio comprising of Segregated Portfolio may not realise any value or may have to be written down.
- 3) Listing of units of Segregated Portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

C. Risk mitigation strategies

The Scheme will invest in PSU Bonds / SDLs which are constituents of the underlying Index viz. Nifty PSU Bond Plus SDL Apr 2027 50:50 Index. Based on the availability of issuances, it is expected that the portfolio allocation could be different than that of underlying index allocation and could result in Tracking Error. That said, broad risk parameters of the portfolio of the Scheme such as credit rating, weighted average YTM, weighted average maturity, asset allocation etc. are expected to be similar to the Underlying Index.

The Scheme's exposure to money market instruments will be in line with the asset allocation table.

This allocation will be monitored periodically, and it shall be ensured that investments are made in accordance with the Scheme objective and within the regulatory and internal investment restrictions prescribed from time to time.

Since disciplined investing requires risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.

The Scheme has a detailed process to identify, measure, monitor and manage various portfolio risks. The objective is to understand these risks and mitigate them wherever possible.

Few of the key risk identified are:

Risk & Description specific to the Scheme	Risk mitigants / Management Strategy
Market/Volatility Risk Risk arising due to price fluctuations and volatility, having material impact on the overall returns of the Scheme.	The Scheme, being a Target Maturity Date index fund structure, is expected to follow a Buy and Hold investment strategy in a passive manner. Based on that, we expect to mitigate intermittent price volatility in the underlying assets. Investors who remain invested until the maturity of the Scheme are expected to mitigate market / volatility risk to large extent.
Credit risk Risk associated with repayment of investment	The Scheme intends to invest in AAA rated PSU bonds issued by CPSEs/CPSUs/CPFIs issued by other Government organizations & SDLs issued by State governments. These CPSEs/CPSUs/CPFIs and other Government organizations are controlled by the Government of India. As a result the bond issued by them are considered as relatively safe. SDLs are issued and serviced by the RBI. SDLs are eligible for SLR investments.
Liquidity risk Risk arising due to inefficient Asset Liability Management, resulting in high impact costs	The Scheme intends to invest in AAA rated PSU bonds issued by CPSEs/CPSUs/CPFIs issued by other Government organizations & SDLs issued by State governments. In general, bonds issued by PSU entities enjoy higher level of secondary market liquidity.
Interest rate risk Price volatility due to movement in interest rates	The Scheme being passively managed and a Target Maturity Date index fund structure, is expected to follow a Buy and Hold investment strategy in a passive manner. All investments are within the maturity date of the

	Scheme and the underlying Index. This should help mitigate the interest rate risk.
Concentration risk Risk arising due to over exposure in few securities	The index intends to hold a diversified portfolio of AAA rated PSU bonds and SDLs.
Event risk Price risk due to company or sector specific event	The Scheme intends to invest in in AAA rated PSU bonds issued by CPSEs/CPSUs/CPFIs issued by other Government organizations & SDLs issued by State governments. These bonds / SDLs are perceived to be relatively safe with quasi sovereign risk due their government ownership.
Performance risk Risk arising due to change in factors affecting the market	The scheme is passively managed

Portfolio Turnover:

The Scheme is a Target Maturity Date Index Fund. It is expected to be managed in a passive manner. The Scheme will endeavour to keep the portfolio turnover at a minimum. However, the portfolio turnover ratio may vary as the Scheme may change the portfolio according to Asset Allocation to align itself with the objectives of the Scheme and in accordance with the composition of Nifty PSU Bond Plus SDL Apr 2027 50:50 Index. The effect of higher portfolio turnover could be higher brokerage and transaction costs

Nifty PSU Bond Plus SDL Apr 2027 50:50 Index seeks to measure the performance of portfolio of AAA rated bonds issued by government owned entities & SDLs maturing during the six months period prior to the maturity date of index. The index shall mature on April 30, 2027.

The index is computed using the total return methodology including price return and coupon return.

Index Structure

The index contains 2 equal weighted components as on the base date of index

1) PSU Bonds component: Most liquid bond issued by AAA rated government owned entities with issuer level minimum outstanding amount of Rs. 100 crores in the eligible bonds of the issuer maturing during the six months period ending April 30, 2027.

2) SDLs component: Most recently issued 10 SDLs issued by top 10 states/UTs selected based on their outstanding amount maturing during the six months period ending April 30, 2027.

1) Methodology for PSU Bonds component – Constituting 50% of the Index

Selection Criteria

• Issuer Selection:

- Eligible issuers having credit rating of “AAA” (Triple A) at the time of index creation/review are shortlisted. In case an entity is rated by multiple rating agencies, the lowest rating assigned to the Non-Convertible Debenture/Long Term Debt of the entity is considered for the index selection purpose
- Further, issuers from the above step which have individual total outstanding of minimum Rs. 100 crores in eligible bonds maturing during the six months period ending April 30, 2027 are selected for the index

• Bond Selection

- For every selected issuer, most liquid bond based on liquidity score calculated based on the trades available during the latest month is part of the index. In case a shortlisted issuer has no bond traded in the latest month, the period of analysis is relaxed to last 2 months and then to last 3 months and so on till 6 months.
- The liquidity score is calculated by allocating 80% weights to aggregate trading value, 10% weights to number of days traded and 10% to number of trades of the bond during the six months period prior to the base date of the index
- If no bonds of an issuer are traded in the last 6 months, the bond with the latest maturity to be part of the index
- Only one bond per issuer to be part of the index

Illustration:

ISIN	Trading Value (TV) (Rs. Crs.)	No. of days trade (NODT)	No. of trades (NOT)	Liquidity Score (TV/ Total TV*0.80 + NODT/Total NODT*0.10 + NOT/Total NOT*0.10)
A	6,500	75	115	37%
B	5,500	82	120	33%
C	5,300	55	85	30%
Total	17,300	212	320	100%

Weight Assignment

- Each issuer that is part of the PSU Bonds portion (constituting 50% of index) is given equal weight as of the base date of the index
- Subsequently, the weights may drift due to price movement
- Any coupon amount received is assumed to be reinvested in the portfolio on the same date, in the proportion of the existing weights

2) Methodology for SDLs component – Constituting 50% of the Index

Eligibility norms

SDL should not be a special bond

Issuer Selection

Top 10 states/UTs are selected based on their total outstanding amount maturing during the six months period prior to the maturity date of the index.

Security Selection

Most recently issued SDL of each of the selected 10 states/UTs from the above universe maturing during the six months period prior to the maturity date of the index to be included in the index as on the base date of the index. Only one SDL per State/UT to be part of the index

Weight Assignment

- Each state that is part of the SDL component (constituting 50% of index) is given equal weight as of the base date of the index
- Subsequently, the weights may drift due to price movement and accordingly, the total 50% weight of the PSU Bonds component may also drift and will not get reset
- Any coupon amount received is assumed to be reinvested in the portfolio on the same date, in the proportion of the existing weights

Index Rebalancing/Reconstitution

- Index will be reviewed at the end of each calendar quarter
- During the quarterly review, existing issuers and their bonds in the index to be continued if they continue to meet the eligibility and selection criteria. If there are new issuances of PSU issuer which meet the eligibility and selection criteria and such issuer is not already part of the index, then such issuer will be selected to be part of the index. For such an issuer, the bond will be selected based on the bond selection criteria
- In case of any inclusion of any new PSU issuer in the index, the total running weight of all the PSU issuers will reset to equal weight across new PSU issuers
- In case there is a breach of 15% in weight of any issuer, excess weight will be redistributed in rest of the portfolio proportionally
- Based on the governments 'in principle approval' to disinvest its stake in some of the government owned entities, such entities are not included to be part of the index at launch/inception of the index. On account of disinvestment in an existing constituent, such issuer shall be excluded from the index effective next rebalancing/reconstitution only if the disinvestment process has been completed
- In case an eligible issuer gets downgraded and fails to meet index methodology for PSU Bonds Component before the portfolio disclosure, such issuer shall be excluded from being a part of the index from next effective date and in no case, it will be more than 5 working days
- Apart from scheduled review, in case an existing issuer gets downgraded below AAA, bonds of such issuer to be excluded from the index within 5 working days
- Existing SDLs in the index to be continued if they continue to meet the eligibility criteria. Ineligible SDLs will be excluded from the next rebalancing date
- Due to the above stated reasons, if the index is rebalanced and issuer/s move out of the index,
 - If the total number of PSU issuers in the index is 4 and above, then the total weight of the PSU securities being excluded will be redistributed among the remaining PSU securities proportionally. This will be subject to 15% issuer limit
 - If the total number of state/UT issuers in the index is 4 and above, then the total weight of the SDLs being excluded will be redistributed among the remaining SDL securities proportionally. This will be subject to 15% issuer limit

- If the total number of PSU issuers in the index fall below 4, then new PSU issuers will be included in the index based on the issuer selection and bond selection criteria mentioned in the PSU Bonds component index methodology section above, to take the PSU issuer count to 4 and the total existing weightage of PSU Bonds component will be divided equally amongst all the PSU issuers in the index
- Due to any reason, if the total number of state/UT issuers in the index fall below 4, then new state/UTs will be included in the index based on the issuer selection and security selection criteria mentioned in the SDLs component index methodology section above, to take the state/UT count to 4 and the total existing weightage of SDLs component will be divided equally amongst all the state/UT issuers in the index
- Except for above stated reasons, there will be no inclusion and exclusion for SDLs component in the index during the quarterly review
- If there is no inclusion or exclusion in the index on the review date, the weights will not get reset and existing weights will continue. This will be subject to 15% single issuer limit
- As the index includes securities that shall mature during the six month period ending on the final maturity date of the index, any proceeds from the security redemption prior to the final maturity date of the index shall be re-invested using the following waterfall approach:
 - The proceeds from security redemption will be reinvested in the longest maturity outstanding security issued by the same issuer (state/UT in case of SDL and Bond/money market instrument in case of corporate bond) and maturing on or just before the index maturity date. This will be subject to 15% single issuer limit
 - In case a replacement in the form of outstanding security of the same issuer cannot be found for reinvestment then the proceeds from such redemption shall be reinvested in the remaining portfolio on the same date in the proportion of the existing weights. This will be subject to compliance to the SEBI portfolio concentration norms (minimum 8 issuers and single issuer weight cap of 15%)
 - In case due to any reason it is not possible to meet the portfolio concentration norms as prescribed by SEBI, then the proceeds from such redemption shall be reinvested in a T-Bill maturing on or just before the index maturity date. This will be subject to 15% single issuer limit
 - If the last outstanding security (including T-Bill) in the index matures before the final index maturity date, all redemption proceeds shall be assumed to be re-invested in The Clearing Corporation of India Ltd.'s (CCIL) TREPS overnight rate for any subsequent days till the maturity of the index.

Index Termination

The index shall mature on Friday, April 30, 2027

Minimum Target amount	Not Applicable
Maximum Amount to be raised (if any)	Not Applicable
Dividend Policy (IDCW)	• IDCW Distribution Procedure: SEBI Circular lays down the procedure for Declaration of IDCW which clearly says that quantum of IDCW and record date shall be fixed by the Board of Trustees and AMC shall issue a notice to the public

	communicating the decision about IDCW including the record date, within one calendar day of the decision made by the Board of Trustees in their meeting. Record date shall be the date that will be considered for the purpose of determining the eligibility of investors whose name appears on the register of Unit holders. Record date shall be two Working Days from the issue of public notice. The Trusteeship Company reserves the right to declare IDCW on a regular basis and can distribute the same out of investors capital (Equalization Reserve), which is part of sale price that represents realized. The Fund does not guarantee or assure declaration or payment of IDCW. Although the Trustees have intention to declare IDCW under IDCW Option, such declaration of IDCW if any, is subject to Scheme's performance & the availability & adequacy of distributable surplus in the Scheme at the time of declaration of such IDCW. Investors should note that, when the Mutual Fund declares a IDCW under the Scheme, the dividend payments shall be dispatched within seven Working Days from the record date. The requirement of giving notice & the above laid procedure shall not be compulsory for Scheme/plan/option having frequency of IDCW distribution from daily upto monthly IDCW. Effect of IDCWs: When IDCWs are declared and paid under the Scheme, the net assets attributable to Unit holders in the IDCW Option will stand reduced by the IDCW amount subject to TDS and statutory levy if any. The NAV of the Unit holders in the Growth Option will remain unaffected by the payment of IDCW. Even though the asset portfolio will be un-segregated, the NAVs of the Growth Option and IDCW Option will be distinctly different after declaration of the first IDCW to the extent of distributed income, tax and statutory levy paid thereon, where applicable, and expenses relating to the distribution of IDCWs. Mode of Payment of IDCWs: The Scheme proposes to pay IDCW by Direct Credit or through RTGS or NEFT or any other EFT means. RBI offers the facility of EFT for facilitating better customer service by direct credit of IDCW amount to a Unit holder's bank account through electronic credit which avoids loss of IDCW in transit or fraudulent encashment. The Mutual Fund will endeavour to offer this facility for
--	--

	payment of IDCW/repurchase proceeds to the Unit holders residing in any of the cities where such a Bank facility is available. The Fund is arranging with selected bankers to enable direct credits into the bank accounts of the investors at these banks.
